

SAP Cloud Roadmap Consulting and Virtualization Services

Customized, enterprise-level SAP Cloud Roadmap strategies and ROI analyses mapped to your company's business objectives.

SAP Cloud Computing is a game changer – bringing new opportunity, flexibility and efficiency into the IT Landscape. Although companies know that the time to start planning their SAP Cloud strategy is now, with things changing so fast, it's often difficult to know where to begin. What's the best approach? Which Cloud strategy brings the greatest returns?

What's the ROI?

WFT SAP Cloud Roadmap Consulting and Virtualization Services was created to answer all of those questions and help you devise a detailed Cloud strategy that works best for your company's individual needs. Our team of experts studies your environment and identifies how you can get the greatest benefit from Cloud and virtualization today, then creates a roadmap for the future. Just as important, we'll conduct an ROI analysis, so you can see the financial impact of your specific Cloud strategy before you make the change.

SAP Cloud Roadmap Consulting and Virtualization Services

What We Deliver

During a customer engagement, our WFT SAP Cloud Roadmap Consulting and Virtualization Team evaluates your data center and key business processes, as well as your business goals. We'll identify the ideal workloads to transition to Cloud, and provide you with a ROI analysis of our recommended virtualization and Cloud deployment scenarios.

Our service includes these deliverables:

- ROI analysis identifying which applications would provide the best returns when migrated to a Cloud environment, including which business applications should remain on premises or could be moved to a hosted setting.
- An enterprise-level Cloud adoption roadmap and implementation plan, including technology and resource requirements.
- An explanation of how the plan aligns with business strategy.
- Security strategies.
- Guidelines for deployment, security testing and operational management.

Where We Add Value

WFT brings a unique perspective to SAP Cloud for a number of reasons. First, we're the first SAP Certified Cloud Services Partner to help enterprise customers with their Roadmap and Cloud strategies. For the past 10 years, we've been involved in the space, from SAP Infrastructure Integration, Virtualization, High Availability, SAP Disaster Recovery and SAP Re-Platforming from Unix to X86 (Windows or Linux). All of these aspects of virtualization have matured into the SAP Cloud offering we see today.

The members of our SAP Cloud Consulting Team are truly experts in enterprise-level virtualization and Cloud. We understand the technology and security, and are skilled at devising a plan that maps to each individual company's needs. In some cases that may be recommending virtualization as the first step. In other scenarios, the client may have a significant number of applications that are currently Cloud-ready.

It's also important to note that our services don't simply focus on the Private or Public Cloud. Whether you're interested in building out your own Private Cloud infrastructure (On-Premise), leveraging a secure Public Cloud or using a Hybrid Model, our team can recommend the optimum strategy and deployment techniques to get you where you need to go.
