Moodlerooms Integrates Microsoft's Live@edu with Moodle Learning Management System

Plug-in to be released worldwide to Moodle's open-source community of over 55 million users

Baltimore, MD— **Moodlerooms, Inc.**, has developed an integration connecting Microsoft's Live@edu services and Moodle, the world's most widely-used Learning Management System. With this integration, Moodlerooms will make select functionality of Live@edu directly accessible within the Moodle 2.0 and 1.9 environments via single sign-on, further enabling teachers and students to access the quality, enterprise-level tools they need to effectively teach and learn online.

Microsoft Live@edu makes hosted email, communications and collaboration services freely available to educational institutions. Now benefitting over 22 million people worldwide, Live@edu provides access to Microsoft Outlook Live (email), a series of Microsoft Office web applications (Word, Excel and PowerPoint), and Windows Live SkyDrive (online storage).

Moodlerooms' Microsoft Live@edu services plug-in for Moodle enables users to:

- Log into courses using their Windows Live ID and display select Live Services on a Moodle site.
- View and compose emails and calendar events within a Moodle site using Outlook® Live
- Access Windows Live Messenger chat and Bing™ search engine within a course.

By releasing the Live@edu integration to the 55-million user open-source Moodle community, Moodlerooms is enhancing the Moodle teaching and learning experience while extending the global reach of sustainable education solutions.

"The interoperability between Moodle 2.0 and Microsoft's Live@edu services is important to Moodle users on a global basis," says Phill Miller, Moodlerooms Vice President of Product Strategy, "By having this available in Moodle, Microsoft and Moodle users worldwide will be able to use the most recent releases of both products in a seamless fashion."

Moodlerooms will be releasing the Moodle and Microsoft Live Services plug-in code to Moodle's Open Source Community under GPL Licensing, allowing teachers and institutions to download the plug-in under the same widely used open-source license agreement as Moodle. The plug-in will be freely available to download from the moodle.org plug-in directory on Thursday February 23, 2012.
