RETAIL MANAGEMENT

POS for NetSuite

Retail Anywhere POS is a full-featured store solution that enables retailers to process quick and accurate transactions while delivering personalized customer service. Completely integrated with NetSuite, our solution unlocks an end-to-end retail management suite for multi-channel and multi-store retailers.

Flexible and Easy-to-Use

Retail Anywhere POS adapts to a variety of retail segments and can be configured based on individual retail requirements. Our intuitive, touchscreen interface allows for custom colors, buttons, and layouts to create a memorable, easy-to-use system that requires less training time while ensuring speed and accuracy at check out.

Full-Featured

Retail Anywhere POS delivers the most comprehensive transaction set and extensive search capabilities. Easily locate out of stock items, offer instant promotions at the POS, and capture detailed customer and transaction information to facilitate targeted offers and campaigns through NetSuite.

Seamless NetSuite Integration

Retail Anywhere POS uses Web services to support near real-time, bi-directional integration with NetSuite. When transactions occur at the POS, data is replicated to NetSuite. Likewise, inventory updates, price changes, customer updates, or new promotions within NetSuite are replicated to the POS. If the internet goes down, your local POS maintains full operation and immediately shares information between systems once a connection is reestablished.

Full-Featured to increase sales and engage customers

- Easy-to-use, touchscreen interface

- Inventory visibility across store locations

- Robust promotions

- Receiving, inventory transfers, and transfer requests

- Quick checkout with integrated payment processing

- Customer purchase history

- Pricing and selling rules

- Returns and refunds tracking

- Mobility options

- Wide range of reports

- Transaction processing independent of internet
