

Helping You Achieve Excellence in Clinical Performance

Founded in 2000, i2i Systems is a pioneer and leading provider of Population Health Management solutions and services. We are focused exclusively on creating healthier populations by partnering with – and empowering – healthcare organizations in their journey to deliver the highest quality care. We deliver business and population health intelligence through smart technology that supports easier and greater access to data and improves the efficiency of the care team staff. Success, we believe, occurs when smart tools enable dedicated providers to practice at their best.

Today, health care professionals at over 1000 facilities, including over 70% of community health centers in California, 80% of community health centers in Iowa, and over 65% of community centers in Mississippi, rely on i2i Systems for critical clinical insights and powerful tools to improve the health of the communities they serve. The i2i Systems team includes experienced clinicians and software experts who together have created an innovative approach to managing patient populations, one that actually results in significant improvements to clinical outcomes, resulting in healthier populations.

The i2i Systems family of population health management solutions enables clinicians to:

- Implement clinical guidelines of care across large populations.
- Analyze trends with sophisticated reporting and visualization tools.
- Identify patient subpopulations that are out of compliance.

i2i Systems solutions go beyond typical reporting tools by automating specific action plans that allow care teams to proactively manage and coordinate care for defined patient groups. By managing clinical data to gain insights and implement action plans, i2i Systems solutions enable care teams to engage patients in their own care, meet targeted standards of care, achieve measurable improvement in chronic disease and enhance staff efficiency.

The use of i2i Systems applications is creating real-world success today at clinics, physician practices and hospitals:

- **Golden Valley Health Centers** used i2iTracks to reduce the average HbA1c from 8.9 to 7.6 in one year for over 4,000 diabetic patients.
- **Primary Health Care, Inc.** increased its pediatric immunization rate from 42% to 85% with i2iTracks search and patient recall capabilities.
- **Suncoast Community Health Centers** saves \$128,000 annually by using i2iTracks to manage alerts and automate patient follow up.
- **CHC of the Central Coast** generates approximately \$1.8 million in additional annual revenue with i2iTracks by automatically sending 2000 recall letters each month to active and inactive patients.
- **Clinic Ole** generates over \$300,000 in annual revenue by using i2iTracks to identify and recall Child Health and Disability patients eligible for care.
- **Minnesota Family Health Services** increased the number of optimally managed diabetics by 20% within 6 months of implementing i2iTracks.

“With i2iTracks we can unlock the data in our EHR allowing us to easily generate mass patient recalls, decrease costs, and have complete confidence in the data that drives our decision making.

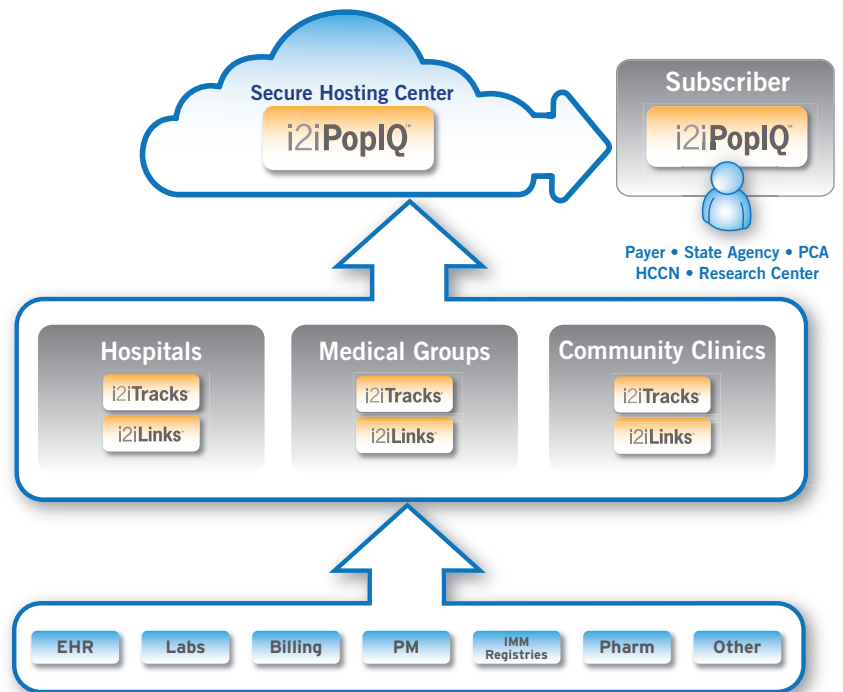

*Dr. Bery Engebretsen, Medical Director
Primary Healthcare, Inc.
Des Moines, IA*

The i2i Systems product suite includes:

i2iTracks: The leading Chronic Disease (CDMS) and Population Health Management System (PHMS) nationwide. i2iTracks is a day-to-day operational tool that uses customizable disease/condition registries, care models, and powerful patient searching and reporting tools to link clinical insights to specific staff actions that standardize and measurably improve the quality of care. i2iTracks comes complete with the current Meaningful Use clinical quality measures, UDS, IHS, and GPRA clinical measures and collaborative reporting requirements.

i2iPopIQ: A strategic cross-population analytics platform, i2iPopIQ brings the proven capabilities of i2iTracks to larger, multi-community populations. i2iPopIQ is a cloud-based data aggregation and analysis platform specifically designed to work with i2iTracks or an EHR to aggregate de-identified patient data and produce reports across millions of patients. i2iPopIQ takes population data analysis to a higher level, enabling state regulators, healthcare networks, researchers and policy analysts to identify low and high performing sites and perform powerful what-if analysis to understand the impact of improving clinical measures and designing pay-for-performance programs.

i2iLinks: A set of powerful data extraction and transformation tools and an extensive library of interfaces that connect data across your organization's HIT ecosystem. i2iLinks supports the use of i2iTracks and i2iPopIQ, by providing comprehensive data extraction and mapping capabilities to enable interfaces with Electronic Health Record systems, Lab Information systems and other patient data systems. i2iLinks

i2i Systems suite of products works together to give you the ability to manage strategically across sites and provide day-to-day operational reporting and activity management at each site—all designed to improve the health of your patient populations.

comes with pre-built interfaces to many vendors and all major Electronic Health Record and Practice Management systems.

All i2i Systems products are supported by professional implementation services to assist you with the integration, implementation and optimization of your solution. A responsive technical support staff is also available to support you day to day. An extensive user community and user conferences allow you to discover new best practices from other practitioners in the market.
