# About A&I Solutions

➢ Founded in 1999
➢ Strategic North American Services Partner for CA
➢ Extensive expertise and experience successfully integrating project and program information with the functionality of the Clarity PPM toolset.
➢ Expertise in developing the foundational support processes and metrics necessary to continue to provide visibility into the critical information necessary to effectively manage your portfolio of investments
➢ AIS provides the capability to deliver system integration projects in days by using a "configuration, not coding" approach to solve entire life cycle of integrations.

Bringing Together the Pieces of Your Clarity Solutions

**O**ur **T**eam will work in collaboration with you to assess current state functionality and customizations of the existing state application. In partnership with you, we will facilitate the definition of the approach necessary to reach your organizations desired state of maturity fully leveraging your investment in the Clarity PPM tool.

This work is foundational to successful integration of your existing program information with the functionality of Clarity and helps to identify any processes which may be impacted through this implementation. During this process, we will identify core functionality associated with your program management goals and associated data ready for import. We will also identify functionality that may be hindered by missing data elements and work with you to define an approach for migration, data collection, and ongoing process support to maintain your program functionality post upgrade implementation.

Leveraging our experience and best in class standards, we will work with your teams to define metrics meaningful to your reporting and analysis efforts. These key metrics are a component of your optimized reporting and data intelligence. We can combine and implement a number of viewing options into this information (portlets, reports, dashboards) tailored to best meet the needs of various stakeholders.

A&I Solutions will leverage your existing methodologies, wherever possible, to provide the project leadership, functional and technical expertise for the successful implementation of Clarity.
