

Air Duct Cleaning

Your **Indoor Air Quality (IAQ)** is important, and having a clean, properly functioning ventilating and air conditioning (ACMV) system is vital to maintaining a **healthy and comfortable living environment**.

A newly cleaned air duct system runs more efficiently than a dirty one, resulting in lower utility bills and a cleaner, less dusty environment.

Big Red's air duct cleaner system removes the dust, dirt, pollen, animal dander and other airborne contaminants that are pulled into your ACMV system every time the air conditioner runs. Over time, they build up inside your ductwork, making your air duct system a breeding ground for mold spores, bacteria, fungus, mildew and other microbes, which are then re-circulated through your environment, impacting the health and comfort of your occupants.

Those who suffer from allergies, asthma or other respiratory ailments, especially children and the elderly, are vulnerable to the effects of indoor air pollution. As a result, most health experts agree on the health benefits of proper, and regular, air duct cleaning.

Our certified technicians have the training and experience to remove harmful contaminants from your environment. Our exclusive vacuum and compressor system pulls air duct pollutants into a contained filtration system so efficient that it is capable of capturing debris 1/300th the diameter of a human hair.
