The Digital WarRoom® E-Discovery Platform

The Digital WarRoom® Platform is a robust e-discovery architecture designed to support fast and efficient ESI processing, content analysis and early case assessment, review, marking and production of email and documents in response to litigation, investigations, M&A activity, and other legal challenges.

ONE E-DISCOVERY SOLUTION FOR ALL MATTERS

Whether your matter is one Gigabyte of data or many Terabytes, Digital WarRoom has the ideal solution to contain case data and make it accessible for searching, categorizing, review, marking, and production:

- **DWR Pro™**: a robust desktop e-discovery application that processes email and document files, enabling a single user to search, organize, review, tag, redact, bates stamp and produce ESI on small and medium size matters, up to a million documents.

- **DWR WorkGroup™**: a multi-user application for end-to-end e-discovery, supporting ESI processing, management, early case assessment, document review, tagging and production. Also available on a pre-configured appliance, DWR Server.™

- **DWR Remote™**: a secure repository hosted by GGO, is ideal for cases with high data volumes or globally dispersed teams. The SaaS "cloud computing" model combines managed access control with around-the-clock availability and GGO Administrative support.

EASY UPGRADE FROM DESKTOP TO HOSTED MODELS

When an initially small case evolves to a longer-term, higher volume matter, the database and attorney work product can transfer to a hosted model (on servers or in the cloud) with virtually unlimited storage.
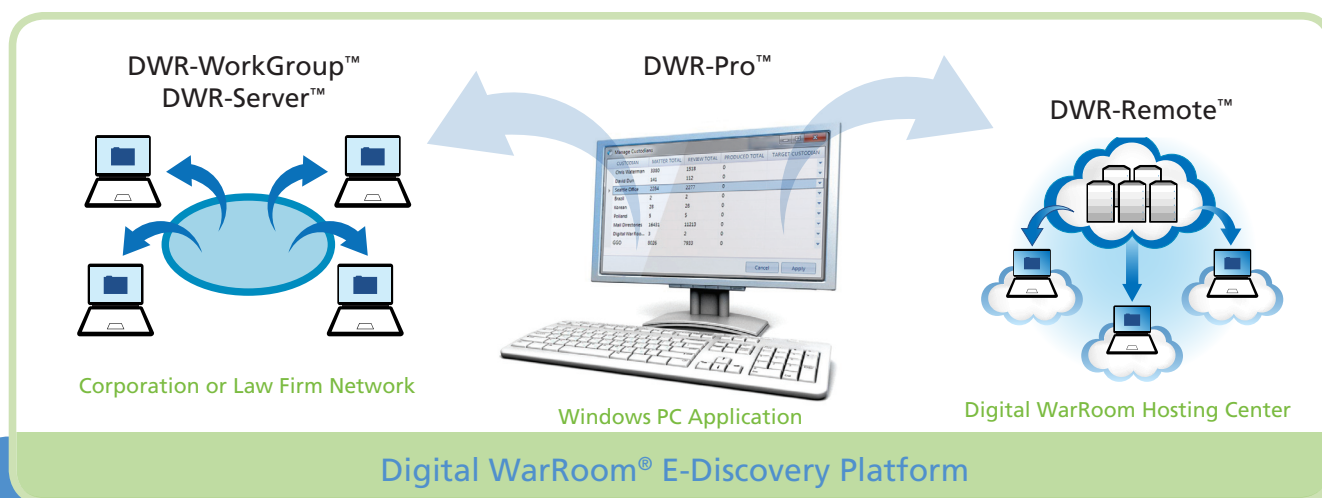

- Extremely affordable PC application for small matters or sampling
- Risk-free migration path to large-scale hosted e-discovery on DWR WorkGroup, Server or DWR Remote
- All metadata and attorney work product remain intact on migration
- Eliminates time and expense of re-processing
- A Work Product Repository model makes documents and work product available for reference or reuse in subsequent matters

TRANSPARENT AND DEFENSIBLE PROCESSES

- Comprehensive Activity Logging: Every processing event is captured in detailed reports
- All attorney decisions are captured in a log file, confirming when and by whom a decision was made.
- System generated Privilege Log, print-ready and exportable

ROBUST EARLY CASE ASSESSMENT

- Keyword, Boolean, Fuzzy Search, stemming
- "What If" analysis explores content and metadata
- Graphical "Who to Whom" provides faceted views of relationships and conversations

Digital WarRoom® E-Discovery Platform

GGO Project Management and Specialty Services

Digital WarRoom® by GGO

The e-discovery experts at Gallivan, Gallivan and O'Melia are actively transforming the technology and practice of e-discovery. Our best-of-breed set of products, aptly named Digital WarRoom,™ is backed by deep expertise in processing, analytics, strategy, and e-discovery project management.

E-DISCOVERY FOR EVERYONE™

Traditional e-discovery services have catered to the 'mega-cases' – perhaps as few as 10% of the overall number of matters in litigation. At GGO, our goal has always been to cost effectively support every client and every matter, regardless of scope or size. A true end-to-end solution, the Digital WarRoom platform is capable of handling every matter in a cost-efficient and consistent manner. We do this on one seamless architecture, with the ability to flexibly configure and scale to fit the project at hand.

EXPERT PROJECT MANAGEMENT AND SPECIALTY SERVICES

We've got your back. Digital WarRoom software is amazingly easy to use, and many legal professionals will find themselves at a "Pro" skill level in just a few hours. However, if the case data, complexity or demands on your team should grow beyond your comfort level, the GGO team is ready to provide custom data mining, project management to assure your success.

Acquisition services, data forensics, encrypted data, and secure hosting of IP or case data for 3rd party review – all are among the specialty services we provide on request.

Transforming the E-Discovery Value Proposition

Eliminate volume-based Pricing! The "per GB" model is past its prime. With Digital WarRoom, processing fees are based upon collections (or sets) of data to be processed, allowing you to accurately assess the cost of ESI processing early enough to properly assess the case, and to avoid expensive surprises.

Potential Savings with Flat-fee Processing

ESI Volume Processed*	Volume Based Processing at $300/GB	Digital WarRoom per collection processing fees
1-10 GB	$300 - $3,000	**$1,000**
10-100 GB	$3,000 - $30,000	**$2,000**

*Processing includes expanding container files (zips, PST files, etc.), fingerprinting, de-NISTing (identifying and removing system files based on MD5 fingerprint), culling/filtering (date, extension, etc.), deduping, and indexing for keyword search.

At GGO, we are software designers, lawyers, and innovators who aspire to make a difference. We work hard, play hard, and give back to our community. We are changing the way the world thinks about value in e-discovery solutions. At the root of the GGO value proposition is a strong belief that well-designed technology can be accessible, affordable, and easy to use for all legal professionals. Let's work together to change the way the world conducts e-discovery.
