Multiplatform™

Cloud & Virtual Desktops Made Easy

What is Userful Multiplatform?

- A **simple solution** to deploy Cloud, Windows™ and Linux desktops on cost-effective zero client devices.

- The **lowest-cost Cloud and Virtual desktop solution** on the market - low-cost high-performance zero clients; pay for VDI licenses only when necessary; and no high licensing cost for virtualization infrastructure.

- Virtualized **Windows** facilitates easy **transition to Cloud and/or Linux** desktops.

Host PC/Server

Gigabit switch

Zero client stations connect to the Host PC/Server over the LAN

Host PC/Server can be safely located in the server room

One standard PC with Core i7 processor and 16 Gig RAM can power 20 stations running independent 720p full screen videos.

High multimedia performance on all stations

- Run full-screen 720p videos on zero client stations.

Save on licensing

- VDI licensing is only needed for the sessions running Windows OS.

Deploy the zero client stations where needed

- Zero clients can be connected to the Ethernet ports and/or to USB ports on the Host PC/Server.

Choose to deploy writable or locked Windows OS session

- When stations are locked, users' changes are removed after each boot.

No single point of failure

- In case of hardware failure, zero clients connected to 1 host through the LAN are automatically transferred to another Userful host in the LAN.
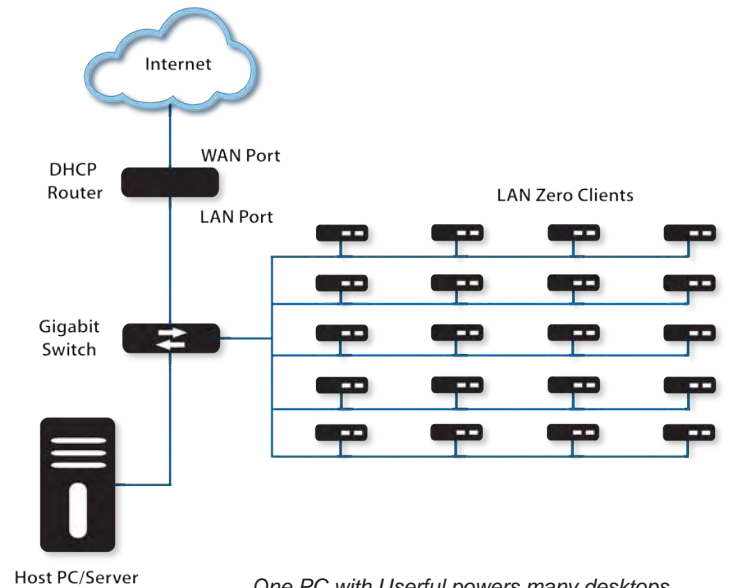

Run cloud sessions

- Users that only need web applications can run browser based stations (no OS needed).

Use RDP connection

- Connect to legacy applications with RDP.

No hardware manufacturer lock-in

- Userful supports zero clients from HP, ViewSonic, LG, Acer and Atrust.

Internet

DHCP Router

WAN Port

LAN Port

Gigabit Switch

LAN Zero Clients

Host PC/Server

One PC with Userful powers many desktops -- with a choice of Linux and/or Windows OS, Chrome cloud desktop, or remote protocols

Keep hardware up-to-date without replacing the entire infrastructure

- Replace 1 server every 3-5 years to benefit from technology upgrades.
- The zero clients have a 8-10 year lifespan.

Significant cost-savings

- Zero client devices cost $70-120, consume 3W of power, and last as long as 10 years.
- Lower up-front and ongoing IT costs.
- Reduce software licensing costs using thousands of free open source applications.
- Reduce electricity consumption by 60%.
- Less space and cabling required.
- Save staff time - install software on 1 PC, and more than 20 users can use it.
