Oxygen Forensic Suite 2013 Adds Support for Windows 8, YouTube, New Apps and Devices

Oxygen Software updates its flagship mobile forensic product, Oxygen Forensic Suite 2013, boosting the number of supported devices and mobile apps. The new release gains the ability to acquire and analyze Windows 8 devices, enables support for more than 200 additional devices and supports recent Apple iOS versions including iOS 6.1 and 6.1.2, adds support for a number of communication and multimedia apps such as Fring, QIP and YouTube, and includes a new graphical chart is added to the user interface, enabling forensic experts to easily analyze activities of a single contact or a group of contacts within any period of time.

Acquiring Windows 8 Devices, New iOS Versions Boosts Number of Supported Devices to 6500

The new release of Oxygen's flagship forensic tool allows forensic experts acquiring and analyzing mobile devices based on the new Windows Phone 8 OS, Microsoft's new mobile OS which occupies a growing mobile market share. A convenient extraction method is now available, enabling investigators extract all media content from the device including Microsoft Office documents, images complete with tags and geolocation information.

The updated Oxygen Forensic Suite 2013 also adds forensic support for the most recent versions of Apple iOS and iTunes including iOS 6.1, 6.1.2 and iTunes 11.0.2. The new release further expands the number of supported mobile devices by adding support for more than 200 new models including Alcatel One Touch OT-992D, Pantech P9090, Samsung GT-B9388, Sony Xperia E C1505, ZTE V790, and many others. The new release boosts the number of supported models to over 6500.

10 New Communication, Productivity and Multimedia Apps Supported

Oxygen Forensic Suite 2013 now supports a number of popular applications used for instant messaging, productivity and entertainment. Fring, Line and QIP messengers for Android OS are now supported along with Springpad and Catch productivity applications for iOS and Android OS.

A new Multimedia group with two new applications is added, listing supported entertainment apps. The new group contains YouTube (iOS and Android OS) and Hide it Pro (iOS) applications. YouTube support allows finding out recently watched videos, access cached searches and account details.

Performance and Usability Enhancements

A new graphical chart is available to display user activities for the selected periods of time. The chart allows grouping events over different time intervals (from one second to one year) and filtering them by various parameters. The chart enables forensic experts to easily analyze detailed activities of a single contact or group of contacts at a glance.

Oxygen Forensic Suite 2013 deals with huge amounts of information, making the need for faster processing algorithms an urgent necessity. The new release is thoroughly optimized, adding the much needed performance to several frequently used modules.

About Oxygen Forensic Suite 2013

Oxygen Forensic Suite 2013 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 6,500 different models, Oxygen Forensic Suite 2013 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location. Timeline is now available for analyzing DMG images.

Another signature feature of Oxygen Forensic Suite allows investigators performing a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and Skype conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2013 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices, making it the tool of choice among government and law enforcement agencies, security services and forensic organizations in more than fifty countries.

About Oxygen Software

Founded in 2000, Oxygen Software is the worldwide leading maker of the advanced forensic data examination tools for smartphones and other mobile devices. The company is dedicated to delivering the most universal forensic solution covering the widest range of mobile devices running Android, Apple iOS, Blackberry, Windows Phone, Symbian and other operating systems. Law enforcement and government agencies, institutions, corporations and private investigators, help desk personnel and thousands of private consumers rely on Oxygen Software products to ensure evidence availability in the event of mobile device data analysis and recovery. Oxygen Software customers include various US and European federal and state agencies such as the IRS, US Army, US Department of Defense (DOD), US Department of Justice, US Department of Homeland Security, US Department of Transportation, US Postal Service, US Supreme Court, European Commission, London Metropolitan Police, French National Police and Gendarmerie, PricewaterhouseCoopers, Ernst & Young, and many others. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot on the top of the list in relevant tests for extracting more data than competitors.
