

SignWave digital door cards automate room scheduling at a price and simplicity that is easy to implement. Our all-in-one solution brings affordable room scheduling to anyone using popular event management software. Additionally, all SignWave displays support PoE (Power over Ethernet) for quick installation.

SignWave automated scheduling is compatible with...

- Microsoft Exchange Server 2010 / Outlook
- Newmarket Delphi EMS
- MICROS Fidelio Opera PMS
- Dean Evans EMS
- Many more to come

Because Event Management Software (EMS) and Property Management Software (PMS) systems are now ubiquitous in facility management, digital door cards are rapidly growing in popularity throughout healthcare, education, convention and corporate centers where meeting spaces may be rented, occupied, or otherwise repurposed on a daily basis. The most common benefit of a digital door card is to place vital scheduling information anywhere it needs to be updated often—and automatically—increasing workplace efficiencies by reducing time-consuming micro tasking of personnel who can now be reassigned to less redundant activities.

Working in conjunction with SignWave digital door cards, SignWave server automatically retrieves and formats scheduling information from popular property management and event data software applications. This provides a “set it and forget it” implementation that makes day-to-day operation hands free. Optionally, large digital reader boards can be added using InfoZone Pro™ server and our leading MediaZone Pro™ digital signage system.

SignWave provides many benefits to scheduling management, such as:

- Automated room schedule data retrieval via SignWave server
- Connects to popular EMS programs for “set and forget” operation
- Supports digital reader board with MediaZone / InfoZone Pro server option
- Access to event data via browser for editing, room combines and room swap
- Manage room schedules with local, mobile or remote browser access
- Walk-up ad-hoc scheduling at rooms using local password protected keypad
- Full Control of Customer Facing information
- Includes built-in scheduler for stand-alone operation
- Add greetings, announcements – change of venue notices
- When room is empty, automatically default to logo or image
- Automatic sequence of scheduling timeline
- Changeable graphic backgrounds to retain brand consistency
- Multiple data templates to optimize data appearance
- Changeable logos for event branding or sponsorship
