# Who is Zia?

Solutions for the Content Connected Enterprise

Zia understands the importance of content to your success - with a focus on where your content comes from and, more importantly, where you need it to be. We recognize that these requirements may be unique to your industry, which is why we have established Zia Public Sector Solutions, Zia Solutions for Financial Services, and other vertical-focused practice groups.

Additionally, we appreciate that content workflows differ by division or department, which is why we've developed solutions for Corporate Finance, Corporate Legal, Corporate Marketing, and other branches of your organization.

Our solutions from Paper to Mobile are targeted at your specific content needs from case management, to document capture, to content migration, and more. Zia-developed products then address unique Content Management System (CMS) use cases from project management including MS Project integration, to digital signatures for contracts management, to multi-tenancy for service providers.

ZIA is an organization of Content People who:

- Provide IT modernization solutions from "paperless" initiatives to advanced workflow
- Deliver managed cloud solutions
- Drive enterprise mobility technology development and deployment
- Offer enterprise integration from ECM to CRM to ERP

At Zia, we are committed to providing measurable business results on time and within budget. We connect you with industry-leading partners like Alfresco for ECM and Ephesoft for Intelligent Document Capture to deliver the benefits of open source and open standards.
