

Cellular Therapy and Cord Blood 2013 Market Report

Description: This is the most up-to-date market report focusing on Cellular Therapy and the HSCT/Cord Blood Market Landscape, published by Select Biosciences. In this comprehensive market report, we have focused primarily on quantitative market metrics in order to characterize the growth and evolution of the cellular therapy field --in this vein, we present primary industry data that Select Biosciences has collected as part of its continual industry tracking of this space.

This report analyzes clinical trial trends and the evolution of several therapeutics areas within cellular therapy [orthopedic, skin/wound care, cardiovascular, and CNS disorders] and presents the current status of every single program within the preclinical through the various clinical trial phases and onto commercialization. We also present the breakout of clinical trials in the bona fide cellular therapy sector with respect to geographic breakout, breakout by type of cells utilized, and disease classes interrogated.

Select Biosciences has also provided a detailed quantitative analysis of the cord blood field as it is rapidly evolving. The report's coverage provides hard numbers on sizes of the various registries, the TNC breakouts of banked units, detailed cost breakouts for banking as well as HSCTs utilizing cord blood. Furthermore, given the author's global footprint, they've been able to compare the EU and US markets side-by-side in this analysis.

ATMP regulatory guidelines governing the marketing authorization of cellular therapeutics in the European Union are also given. Details on the statute as well as implications to companies seeking to navigate this space are provided.
