PROVANCE® - THE BEST IN THE BUSINESS

Provance® has been an independent vendor of IT Asset Management software since 1997. For over 15 years enterprises and government organizations of all sizes have used Provance software to control IT costs, increase service management efficiency, and reduce security and compliance risks.

Four years ago Provance began working with Microsoft® to bring the same kind of capabilities provided in its stand-alone IT Asset Management application into the System Center platform. As a result of the collaboration, Provance pioneered development of the first third-party process management pack to provide IT Asset Management functionality from directly within Service Manager. The Provance IT Asset Management Pack was released in spring of 2010, coinciding with the initial release of Microsoft System Center Service Manager 2010.

Provance strengthens the IT effectiveness of companies at every level of the Microsoft Core Infrastructure Optimization model. A Microsoft Gold Certified Partner, Provance holds the Microsoft Software Asset Management (SAM) and Volume Licensing Competencies and is a member of the Microsoft System Center Alliance. Provance was named Microsoft 2011 SAM Innovation Partner of the Year finalist, and was a national 2011 Microsoft Impact Awards Partner of the Year finalist for SAM and Systems Management.

Provance IT Asset Management Pack for Microsoft System Center 2012

The Provance IT Asset Management Pack is a process management pack that runs natively within Microsoft System Center 2012 – Service Manager. It supplements the service delivery and infrastructure management of the Microsoft® Server and Cloud Platform with powerful IT Asset Life Cycle Management and Software Asset Management. From request to disposal, Provance gives you visibility and control of the hardware and software that make up your client, cloud computing and datacenter environments.

Provance Data Management Pack for Microsoft System Center 2012

The Provance Data Management Pack simplifies, speeds and automates the process of getting data into and out of the Service Manager CMDB while simultaneously improving data consistency and accuracy. It lets you quickly and easily source, normalize and import the data you need to support effective IT service delivery and operational management of your client, cloud and data center environments.

Provance Bar Code for Microsoft System Center 2012

For IT Asset Managers using Microsoft System Center and the Provance IT Asset Management Pack that need to supplement the automated asset discovery capabilities of Configuration Manager, Provance Bar Code is a bar code scanning system that lets you inventory and track the physical location of both active and inactive IT hardware from the time they are received until they are disposed. Provance Bar Code is an inexpensive solution built specifically for System Center that dramatically reduces the manual effort and human error associated with gathering and entering asset data.
