**FOR IMMEDIATE RELEASE**

## **Wallet Works Gives Away Patent Pending Slim Wallets on Kickstarter Website**

Wallet Works is giving away a limited number of patent pending slim wallets to supporters of their Kickstarter crowdfunding campaign.

**Deerfield, IL (PR Web), Mar 25, 2013** – [Wallet Works](#) is giving away a limited number of patent pending slim wallets to supporters of their Kickstarter crowdfunding campaign (Visit: <http://kck.st/XXtWwe>). The first 573 people who pledge \$15 or more will receive an additional wallet if the funding goal is reached. The Wallet Works Kickstarter campaign has raised over \$7,500 in the first two weeks of crowdfunding, and will end on April 7, 2013.

The Wallet Works was created in response to problems caused by bulky, unmanageable wallets, and is a very slim cash and card holder that is also intuitively functional. Designed by the same team that invented and patented the popular rubber band ball, “Bandyball” found in major office supply stores, the patent pending Wallet Works tips the scales, and measures almost as much as two credit cards put together.

Wallet Works is designed and made in the USA. The two pieces of high quality plastic that form the structure of the wallet are bonded at the bottom to keep items from falling out. The proprietary rubber band that goes around the wallet is firm enough to hold everything securely together, but stretchy enough for effortless access to cards and cash. This unique patent pending design resolves many of the common usability shortcomings of other slim wallets.

“The support has been overwhelming,” said Danny Wilk, inventor and design owner of Wallet Works. “We want to express our utmost appreciation for all those who have supported us, and giving everyone an extra wallet is our way of saying ‘thanks’.”

“People have been telling me how much they love the design, and that it is the perfect solution for their bulky wallets,” adds Danny. “We just cannot wait to be successfully funded so that we can deliver the Wallet Works into their hands.”

The Wallet Works is currently being crowdfunded on Kickstarter, and the 573 free wallets will be given away to supporters of their project if the funding is successfully completed..
