SATcase™

SATcase™

SMART Communications... Everywhere!

Today, communicating globally is really not that smart...!

Current solutions force you to carry multiple devices and components and you still have to re-add all your contacts one by one!

It's easy to get weighed down with all the technical gadgets you may need... So, we've come up with a better, straightforward way of going global that means less to carry and truly **Smart Communications... Everywhere!**

SATcase™ is simple... a case that enables your existing smartPhone to work where there is **no** mobile/cellphone coverage, using Satellite Communications⁽¹⁾ instead, whilst also acting as a Personal Location Beacon (PLB).

So, now, you can continue to communicate using your existing smartPhone⁽²⁾, in the Desert, on the Ocean, up a Mountain, in the Jungle or even in the Arctic! Feel confident that if anything does go wrong, rescue is already your hands.

SATcase™

SATcase™, *Local to Global, in One click!*

a Ruggedized Case, which enables the use of Satellite Communications⁽¹⁾ on an existing smartPhone⁽²⁾, designed specifically to extend the operational use of smartPhones⁽²⁾, going **local, to global, in one click!**

Most of today's smart devices are only useable at home, around campus and metropolitan areas or where supporting infrastructure already exists. SATcase™ enables these devices to work beyond infrastructure zones, out of the hands of specialists and finally into the hands of clients with a real need to use today's smart technology, without having to use a local mobile/cellular carrier network for 3/4G or even Wi-Fi.

Also, embedded in SATcase™ are several "In Case of Emergency" technologies, to assist in a real emergency, rescue or even kidnap and ransom, providing a more rapid response, due to each of their own unique features, which work together to effect your rescue.

Many of these features have only been previously available to professionals, such as Pilots, Ships Captains and Military Personnel. However, due to the unique integration of these proven rescue technologies, assistance can now be made available to save Back-country Skiers, Adventurers, Yachtsmen, Private Pilots and Aid Workers⁽³⁾.

How SATcase™ works;

- 1. Simply take your smart device and insert it into the case.**
- 2. Close the cover and click the latches closed.**
- 3. Install the SATcase™ App.**

SATcase™ Features and Benefits;

-  Use your own smartPhone⁽²⁾, seamlessly, without the need to learn how to use a new, unfamiliar device.
-  No need to transfer existing contacts to another device just to make calls, send texts and emails.
-  No need to carry multiple, separate devices, with the possibility of forgetting or losing one.
-  Still fits comfortably in your jacket pocket or purse.
-  Maintain communications even in the world's most remote places... during a disaster, whilst on an adventure, vacation or working in the field.
-  Ruggedized construction which seals against the elements, dust and water, meeting both IP-67/8 and MIL-810 standards.
-  Multiple Charging options via Mains, USB, Car, Boat, Aircraft and Military Battery (up-to 48V/DC).
-  Two-Way rescue communications to talk with rescuers.
-  On-line Track and Trace for travel history and live monitoring.
-  Emergency Alert available even without the smartPhone connected.
-  Own internal battery extends smartPhone battery life or to use in an emergency, even when separated from the phone.
-  Range of Standard Accessories and Mounts.
-  Naturally Buoyant for flotation in Ocean/Water.
- Built-in Barometric protection.
