OrthoTennessee Highlights Entrada's Digital Dictation iPhone App as a Key to Successful EHR Adoption in Latest Client Testimonial Video

ORTHOTENNESSEE ATTRIBUTES SMOOTH IMPLEMENTATION OF EHR SYSTEM TO ENTRADA'S INTEGRATED WORKFLOW SOLUTION, ENHANCING PHYSICIAN PRODUCTIVITY AND SATISFACTION IN THE PROCESS

NASHVILLE, Tenn., July 9th, 2013 - Entrada has announced the most recent addition to its [client video testimonial](#) series featuring OrthoTennessee (OrthoTN), one of the largest and most respected orthopaedic groups in the Southeast. To preserve its provider's dictation-based workflow, OrthoTennessee deployed Entrada's digital dictation solution to help ensure a successful transition to its EHR system, maintaining and even enhancing physician and staff productivity in many cases.

OrthoTennessee emphasized [protecting physician productivity](#) throughout its transition from paper to digital records, often looking to third-party technology solutions to minimize any workflow disruptions for its provider base. OrthoTennessee chose Entrada's [mobile dictation application](#) to enable physicians to continue dictating throughout the transition, citing its ease-of-use, mobility, security and remote management tools.

"I have been using the Entrada application for over a year now. A nice aspect of this solution is I can go home or to the hospital with charts and I'm given the flexibility and mobility to dictate my notes wherever I am and be finished with that patient encounter," noted Dr. Robert E. Ivy, Orthopaedic Hand Surgeon at OrthoTennessee.

The physicians at OrthoTennessee dictate with Entrada's digital dictation solution via iPod Touches centrally managed through secure VPN connections. The administration also chose to deploy the devices for remote use only, ensuring full compliance with mandatory ordinances, as well as HIPAA regulations.

"Since Entrada's mobile application runs on iPod Touches (iPhones and iPads), our physicians were already so familiar with the iOS platform that it made adoption of this digital dictation solution very simple and easy," remarked Karen Clark, Chief Information Officer at OrthoTennessee.

Entrada's workflow solution, powered by its mobile application, provided OrthoTennessee the technology advantage the administrative staff had been searching for. The staff is now free from spending countless hours intervening with a physician's dictated clinical note, gaining the productivity and time allotment needed to focus on areas of higher value. The physicians and staff have testified that Entrada's mobile solution has made their transition to an EHR a smooth process, enabling them to focus on delivering the highest level of quality patient care.

About Entrada

Entrada protects physician productivity before, during and after the transition to an EHR system. Since every provider's workflow is different, Entrada's cloud-based voice engine enables physicians to dictate on their terms, whether through a digital dictation and backend editing workflow or through real-time, front-end speech-to-text for those who wish to self-edit. Whether dictating from a worklist on a mobile device or from directly within the EHR with a speechmike, Entrada provides a fast, easy way to document clinical information and makes EHRs much easier to adopt and use.
