## Entrada to Exhibit Mobile Dictation Solution at Greenway Medical Technologies PrimeLEADER Conference

NASHVILLE, Tenn., August 8<sup>th</sup>, 2013 - [Entrada](#) announced today it will be exhibiting at the Greenway PrimeLEADER 2013 conference from August 22-25 at the Gaylord National Resort and Convention Center in Washington, DC.

[PrimeLEADER](#) is Greenway Medical Technologies' premier user conference. This year's conference, with the theme of LEADERSHIP, will bring together more than 1,000 healthcare professionals who will hear keynote presentations from industry thought leaders and participate in workshops and seminars to help them optimize their use of [PrimeSUITE](#)<sup>®</sup>, Greenway's certified and fully integrated electronic health record, practice management and interoperability solution platform. More than 50 partners and exhibitors will be on-hand to demonstrate products and services that provide value complementary to PrimeSUITE.

The partnership provides both existing and future Greenway customers the ability to easily adopt the PrimeSUITE platform while also preserving and enhancing a provider's dictation workflow. Entrada's mobile dictation solution syncs with the PrimeSUITE PM to build a daily worklist. A physician then simply dictates a note, and Entrada automates the text conversion and editing and inserts the finished note back into individual text fields within the PrimeSUITE EHR. The level of integration between the two systems provides a level of convenience and interoperability for which many providers have been searching.

"We look forward to taking this partnership to the next level and are excited to exhibit this year at the PrimeLEADER conference," said Bill Brown, CEO of Entrada. "Beyond the amazing learning opportunities, our presence at PrimeLEADER will enable us to introduce Entrada's digital dictation to existing Greenway clients looking for innovative and integrated solutions to help streamline documentation and increase productivity."

### About Entrada

Entrada protects physician productivity before, during and after the transition to an EHR system. Since every provider's workflow is different, Entrada's cloud-based voice engine enables physicians to dictate on their terms, whether through a digital dictation and backend editing workflow or through real-time, front-end speech-to-text for those who wish to self-edit. Whether dictating from a worklist on a mobile device or from directly within the EHR with a speechmike, Entrada provides a fast, easy way to document clinical information and makes EHRs much easier to adopt and use.
