

Notification Center Mobile™

EMERGENCY NOTIFICATION IN THE PALM OF YOUR HAND

When an incident or crisis occurs, where will you be? In front of a computer? On the go?

People are increasingly mobile and responders could be anywhere, including the scene of the incident. Being able to warn and inform people from wherever you're located can save crucial time when dealing with critical communications. You need a notification tool that reflects the way your people work and doesn't constrain you.

Notification Center Mobile gives you the power and versatility of our web-based Notification Center in a smartphone or tablet. Notification creators quickly launch alerts with just a few taps on the screen. Customized templates ensure that the right people are reached with the right message.

Real-time reporting immediately shows the delivery status and responses, and you can drill-down to see more detail. The Notification Center tracks all details of every message, giving you a record for compliance documentation or after-action reports.

The app operates in receive-only mode for recipients. With one touch, recipients can respond to the alert and provide their status. Users need no prior knowledge of how to use the app, thanks to its simple, user-friendly interface.

Notification Center Mobile is a native app that's built for speed and reliability. It even works under adverse conditions, such as low connectivity or no voice coverage. To simplify deployment, the app automatically configures itself to send/receive or receive-only mode, based on user settings in the Notification Center.

Customized templates eliminate human error

Compose different messages for different device types

Deliver push notifications

Gather responses using polls

Real-time reporting confirms message delivery, receipt and responses

Strong encryption for secure communications

Whether you're in a remote location or simply on the go, Notification Center Mobile communicates with any number of people within minutes.

Revolutionary Mobile Communication

The Notification Center integrates with EarShot, the first-ever mobile application to provide rich, 2-way messaging through forms, text, photos, documents and GPS location.
