# Situation Center Mobile™

## INCIDENT MANAGEMENT IN THE PALM OF YOUR HAND

During a crisis, many of your incident responders will be mobile, close to where they're needed. Incident management software is the smartest way to drive the response, but how can your team use the software if they're not in front of a computer? You need a way for them to communicate and coordinate actions using mobile devices. You need incident management software that reflects the way you work and unlocks your full potential. You need Situation Center Mobile.

The power of MissionMode's streamlined incident management system, the Situation Center, is now available in the palm of your hand. Using tablets and smartphones, your people collaborate, manage tasks, access plans and resources, send alerts, and drive the incident response to a successful conclusion.

People work together as if they were in the same room, no matter where they are located. And the Situation Center Mobile app is easy to use, thanks to its simple, user-friendly interface.

Quickly create a virtual command center with just a few taps on the screen. Immediately, your teams are alerted and equipped with the right plans, checklists and resources to update and track progress. This gives them a valuable head start on the response and keeps your entire team in sync all the way through to recovery and after-action.

Using the incident log, people share vital information and ensure that everyone has a common operating picture of the incident. The status of tasks and alerts are shown using color-coded visual indicators, giving you an overview at a glance. You can also quickly view the status of team members, such as "on-site in 30 minutes" or "need assistance."

Features

Time-stamped incident log

Manage team and individual tasks and checklists

Resource library for plans, files and links

Emergency notification system

Real-time dashboard

Strong encryption for secure communications

Situation Center Mobile reduces the time, cost and risk of the response, no matter where your teams are located.

Revolutionary Mobile Communication

The Notification Center integrates with EarShot, the first-ever mobile application to provide rich, 2-way messaging through forms, text, photos, documents and GPS location.
