

**TouchSystems** continues to make advances with multi-touch technologies and offers several displays that feature six (6) touch points or more and are Windows 8 ready. The displays make use of either projected capacitive or infra red touch technology.

**Why Multi-Touch?** Multi-touch puts the world at your customers' fingertips. You empower them by sharing relevant information and helping to guide them toward some sort of decision. For that reason, multi-touch technology finds a home in a number of environments: retail, hospitality, medical, education, and corporate.
