

Why Customers Prefer WebMux™ Traffic Management Appliances

Performance • Affordability
Discover the Difference

WebMux™ is a high-performing traffic management appliance (also known as a load balancer and application delivery controller [ADC]) for managing and directing network traffic. Great emphasis is placed on the development for high reliability with intensive algorithms for feature-rich performance, and the best in class server-grade hardware architecture platform.

Here are a few reasons!

- High speed 64-bit processing
- Quality, high-performance, and efficient server-grade hardware
- Load balancing reliability
- Easy to setup and trouble-free maintenance
- Self-contained (No extra hidden costs)
- Supports up to 5,000 servers
- HDMI management control (A500X and A600X models)
- Feature rich integrated software
- Four load balancing operation modes
- Full-range load balancing scheduling methods
- Robust security
 - (DDoS protection, exclusive Flood Control® feature for cyber crime protection, IPv4 to IPv6, Intrusion Prevention System, TCP SYN protection, and up to 8184-bit private SSL Keys)
 - Built-in SSL termination
- No additional annual maintenance contract required
(Includes full year product warranty, software firmware updates, and product technical support)
- 30-day money back guarantee
