Oxygen Forensics and Passware Partner to Deliver Complete Evidence Discovery Solution in Mobile Device Forensics, Investigation and eDiscovery

Oxygen Forensics announces the availability of a new edition of Oxygen Forensic Suite 2013. The Passware Edition of the company's flagship mobile forensic product delivers investigators a complete evidence discovery solution providing integrated recovery of passwords protecting encrypted files discovered during the investigation.

When analyzing mobile devices, investigators often encounter different types of password protection. Extracting these passwords instantly with Oxygen Forensic Suite is not always possible due to one-way encryption or password hashing. In order to enable access to password-protected information, the new edition integrates two forensic products into a single package, and includes Oxygen Forensic Suite Analyst and Passware Kit Forensic.

For a limited time, the new edition is available for a discount representing savings of \$999 off the regular price. The discount expires on December 1, 2013. By placing an immediate order, forensic specialists may obtain two powerful set of forensic tools for the price of a single tool.

Mobile Forensic Suite with Integrated Password Recovery

To facilitate the recovery of passwords protecting mobile devices backups, Oxygen Forensics integrates a powerful password recovery product into its mobile forensic solution. The new product named Oxygen Forensic Suite Passware Edition takes mobile forensics up to the next level, delivering investigators a fully featured suite that can automatically break or recover passwords protecting various types of information such as encrypted files and containers, password-protected backups, messages and attachments, Web site and social network accounts.

"A mobile device itself is not the only source of evidence and in some cases is not available for law enforcement, investigations, and eDiscovery," said Oleg Fedorov, CEO of Oxygen Forensics. "Now experts need to forensically extract data from all possible sources including backups. Partnering with Passware gives our customers access to password-protected Android and iTunes backups data through a single interface".

Everyday passwords set by most smartphone users are limited in length and complexity due to the inconvenience of using on-screen keyboards. This fact combined with new password recovery capabilities implemented in Oxygen Forensic Suite Passware Edition can often deliver great success rate in reasonable timeframe.

"The proliferation of smartphones throughout the enterprise and among consumers has allowed criminal behavior to go undetected without a tremendous amount of brute-force password checking," said Dmitry Sumin, CEO of Passware. "Now, due to the expanded capabilities of Passware Kit Forensic to crack Android phones quickly, IT computer forensic professionals can easily gain access to data residing on the most widely used smartphones."

The new product is offered for \$999 off retail until December 1, 2013. Customers are encouraged to contact Oxygen Forensics for an [Oxygen Forensic Suite Passware Edition](#) quote.

About Oxygen Forensic Suite 2013

Oxygen Forensic Suite 2013 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 7,000 different models, Oxygen Forensic Suite 2013 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location. Timeline is now available for analyzing DMG images.

Another signature feature of Oxygen Forensic Suite allows investigators to perform a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and various messengers' conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2013 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices. This makes it the tool of choice among government and law enforcement agencies, security services, and forensic organizations in more than fifty countries.

About Passware Kit Forensic

Passware Kit Forensic is Passware's flagship forensic tool enabling accelerated recovery of passwords protecting more than 200 file types such as office documents and PDF files, encrypted archives, iTunes and Android backups, Windows system passwords, passwords to Web sites, social networks and mail accounts and many more types of data.

In addition to the recovery of plain-text passwords, Passware Kit Forensic can instantly decrypt encrypted volumes protected by popular crypto containers such as BitLocker, TrueCrypt, FileVault2, and PGP by automatically locating and extracting decryption keys stored in the computer's volatile memory or contained in memory dump images.

About Oxygen Forensics, Inc.

Founded in 2000, Oxygen Forensics is the worldwide leading maker of the advanced forensic data examination tools for smartphones and other mobile devices. The company is dedicated to delivering the most universal forensic solution covering the widest range of mobile devices running Android, iOS, Blackberry, Windows Phone, Symbian and other operating systems. Law enforcement and government agencies, institutions, corporations and private investigators, help desk personnel and thousands of private consumers rely on Oxygen Forensics products to ensure evidence availability in the event of mobile device data analysis and recovery. Oxygen Forensics customers include various US and European federal and state agencies such as the IRS, US Army, US Department of Defense (DOD), US Department of Justice, US Department of Homeland Security, US Department of Transportation, US Postal Service, US Supreme Court, European Commission, London Metropolitan Police, French National Police and Gendarmerie, PricewaterhouseCoopers, Ernst & Young, and many others. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot on the top of the list in relevant tests for extracting more data than competitors.
