

Somefa One, The Home Entertainment Personal Computer (HEPC)

October 28, 2013

Somefa One: The Premium All-In-One Solution for Home Entertainment

Jackson, Mississippi. - October 28, 2013 - Somefa LLC (Somefa), a tech start-up that focuses on advance home entertainment solutions, today introduced Somefa One on their crowd-funding website somefa.com. Somefa's goal is to raise funds and create a beta testing team to prepare for their first production run.

What is Somefa One?

Somefa One is the first Home Entertainment PC (HEPC). Somefa One combines Live TV/DVR, Console Gaming, Streaming Media and Digital Media into a powerful PC built using Windows® 8 OS. No more switching inputs.

What features set Somefa apart from other PCs and makes it the first HEPC?

Live TV/DVR with 6 Tuners and Networking Capabilities

Somefa One gives you the ability to watch, pause, rewind and record live tv utilizing Ceton InfiniTV 6 PCIe and Windows Media Center. Somefa One records up to 6 channels at once and works with any U.S. cable provider. To enjoy live TV and DVR recordings on any TV set in any room, simply pair your Somefa One with one or more Xbox® 360s.

Plug and Play your Gaming Console

Somefa One gives you the ability to integrate your Xbox® 360, PS3 or other gaming consoles within Windows® 8. Simply plug in your gaming console, open capture software then play, record or stream your game play on your HDTV, projector or monitor.

Multi Tasking

Most importantly you can multi task these functions, programs and apps all simultaneously. Watch a sporting event and research the star athlete on the web, watch a cooking show and find the recipe online, keep up with your twitter feed while playing a video game, write an article while watching the news, or design a website all on your beautiful HDTV. The possibilities are endless.

Elegant Design

Not many PCs or home entertainment devices look this good. Somefa One has an all aluminum chassis with sand-blasted finish and was designed to fit in just about any home entertainment

center. However, Somefa One is not all about good looks. This chassis uses passive cooling technology to cool the CPU without a processor fan for quieter operation.

One Remote

Somefa One is paired with Cideko's Air Keyboard. The Air Keyboard's combination of mini wireless keyboard and 3-D gyro mouse allows you to easily control the Somefa One from the comfort of your couch. Surf the web, compose emails and update your status on any social network with ease.

Upgradeable and Customizable

There is no need to hide the fact that technology can become dated in a few years. Lots of companies try to lock you in with products that don't allow you to upgrade internal components or parts. This only leaves you with the option to buy a new product or continue using a product that is just about obsolete.

Somefa one at its core is a PC and just about every component is upgradable. You can upgrade the CPU, memory, motherboard, operating system and more. With a little know how, their chassis allows you access to easily replace or add parts.

DIY

Somefa gives you the option to build your own pc. They offer their modified version of the Streacom FC9 chassis. This also includes the nano150 power supply unit and IR remote kit. Giving customers the freedom to build a PC unique for your needs.
