

Sage ERP + BatchMaster ERP gives you total flexibility

BatchMaster ERP is the version of our ERP solutions for Process Manufacturers that gives complete flexibility in integrating with your choice of back- end financial software.

First choice is often financial accounting from Sage: Sage 300 ERP (Accpac), or Sage 100 ERP (MAS 90/200).

Sage back-end financials combined with BatchMaster ERP provides a seamless information flow within your entire business functionality: Finance, Distribution, Process Manufacturing, CRM, and Business Intelligence. BatchMaster ERP provides the Inventory, Sales Order processing, Purchasing, and Manufacturing, and all transactions are immediately reflected in Sage Accounts Receivable, Accounts Payable and General Ledger.

Why does BatchMaster provide the Inventory and Distribution modules? So BatchMaster's Master Production Scheduling (MPS) and Material Requirements Planning (MRP) modules can help you plan what you need to make, and purchase what you need to obtain to make it.

BatchMaster provides all the functionality required by recipe/batch process manufacturers making Food & Beverage, Chemical & Coatings, Cosmetic & Personal Care, Nutraceutical, and Life Science products.

BatchMaster ERP integrates seamlessly with the latest versions of:

- Sage 300 ERP
- Sage 100 ERP

Sage 300 ERP (Accpac)

Award-winning Business Management software that helps small- and mid-sized businesses manage their accounting, operations, and customer relationships. BatchMaster ERP integrates to the MSSQL version of Sage Accpac to provide an end-to-end, seamlessly-integrated ERP solution for Process Manufacturers.

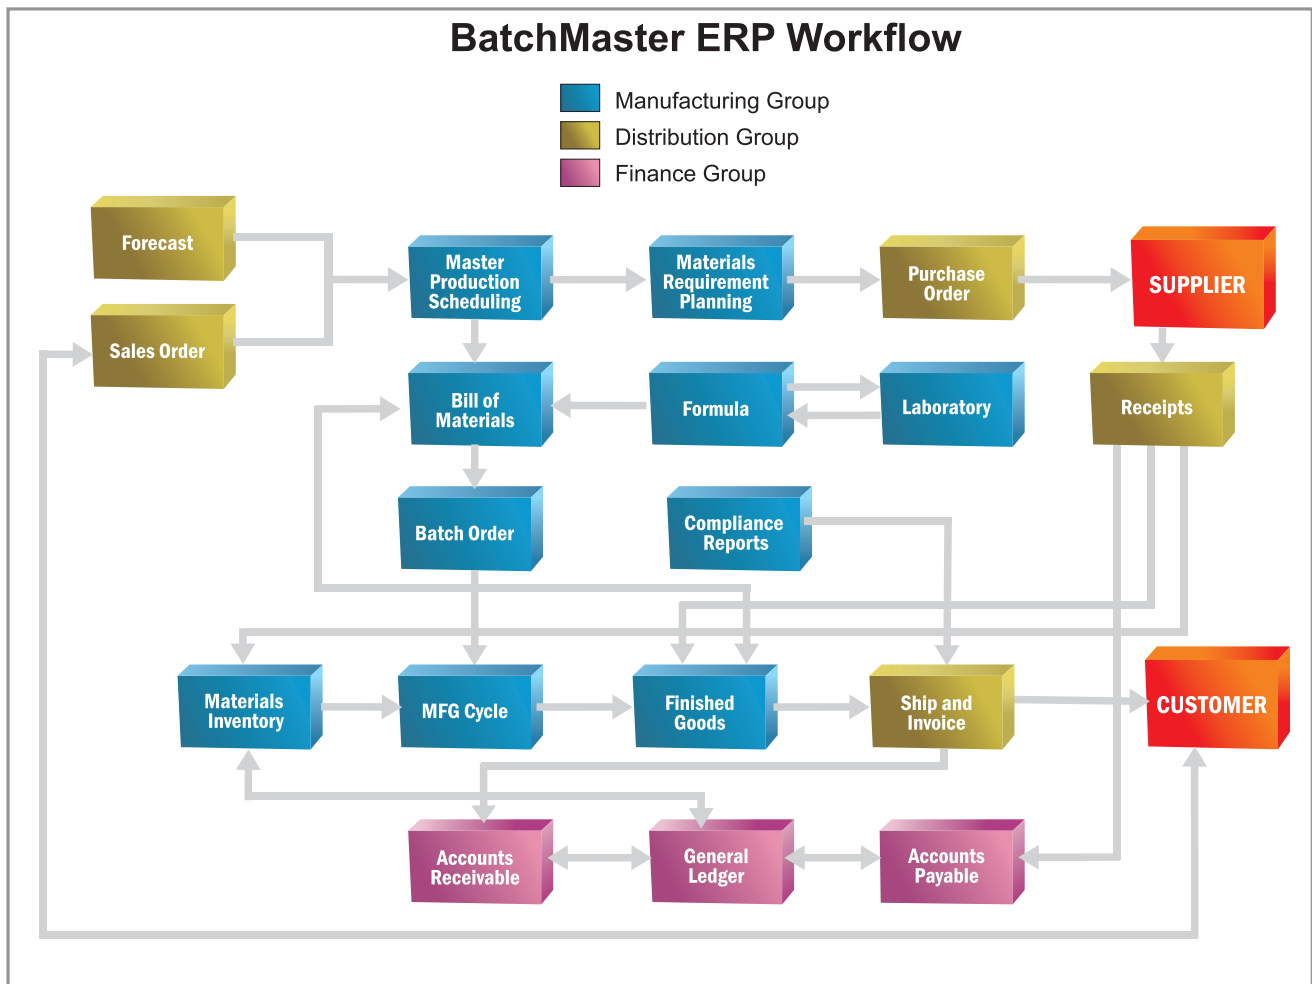

Sage 100 ERP (MAS 90 & 200)

At the heart of Sage's Extended Enterprise Suite are the core financials: General Ledger, Accounts Receivable, Accounts Payable, Bank Reconciliation, and Fixed Assets. Sage 100 ERP systems combine the depth, functionality, and ease of use that you need in an effective business management software solution.

Complete Solution One Version of the Truth

With its tight integration, you can create a customer or a vendor in BatchMaster ERP and it automatically transfers the same information into Sage ERP. At the same time, all inventory movements from receipt of material through production to shipment immediately update Sage's General Ledger, giving you the ability to manage all financial aspects of your business, while leveraging sophisticated formulation, planning, production and Quality Assurance to ensure you are delivering quality, competitively-priced, compliant products to your customers to their specifications, and when they require them. To suit the needs and budgets of small & medium business owners, Sage offers Core Accounting and faster data entry for individual workflow.

Specifically, the system architecture of BatchMaster's Manufacturing and Distribution and financial integration to Sage financial modules is as follows:

As a process manufacturer interested in lowering your Total Cost of Ownership (TCO), increasing your software Return on Investment (ROI), and leveraging your existing Sage software investment, the BatchMaster/Sage integrations offer the best way to achieve all three.

BatchMaster ERP with Sage 300 ERP is an ideal growth path for current users of Sage PfW.
