

Justifacts

# Integration with ORACLE

Integrating the Justifacts background screening process with Oracle's Taleo Business Edition Cloud Service allows users the ability to seamlessly request and manage background checks that help bring in new talent faster!

**Justifacts**  
Credential Verification, Inc.

## ATS Integrations

# ATS Integrations

## Taleo Business Edition

Seamlessly request and manage background checks and other employment screening services from the easy-to-use Taleo interface.

### Turnaround Time

Speed is a critical component to the hiring process and Justifacts recognizes that employment screening reports need to be completed accurately and with a quick turnaround time.

Factors such as applicant information, system inefficiencies and the hassle of toggling between systems can create time gaps that contribute to longer turnaround times.

### Highlights

- Reduces Turnaround Time
- Eliminates Duplicate Order Entry
- Seamless Integration Process
- Pre-integrated Solutions

### The Solution

By utilizing a secure transmission of data between systems, clients can integrate Justifacts' screening reports into the Taleo Business Edition ATS.

Candidate data from Taleo pre-populates into required fields necessary to perform an employment screening search eliminating the need for duplicate data entry which saves both time and money.

This Justifacts integration enables the Taleo ATS to become the single source for candidate information and screening reports.
