

## 'Now Data' Decisions

Voyant CDI™ provides you with real world decisions and influencers for challenges that are real time, compressed, important and complex.

- Harness the power of historical and live multi-dimensional preference, time, location and context data
- Target customers with relevant real-time messaging—or alert supply chain operators to events
- Develop a fine-grain ability to understand the dynamic demands in your target markets and how to seize additional revenue opportunities through innovation
- Increase speed of recognizing significant events through proven technologies with the ability to collect, process and make decisions on massive amounts of data feeds

## Voyant Continuous Decision Intelligence™ (CDI): time sensitive decision making in a multi-dimensional world

We are in a new era of technology—moving beyond static models, enterprise transaction systems and flat representations of processes—to systems of multi-dimensional awareness seeing our world—as *it is happening*. Current technologies struggle to provide users with 'now awareness'—a continuous view of events as they are happening. First generation technologies provide static views—rules that sit on batch data and compel buyers to purchase multiple point technologies to create leverageable apps.

### MULTI-DIMENSIONAL WORLD

Building on our heritage of innovation, Voyant CDI offers industry-special solutions—allowing for not only current state awareness, but the ability to shape and influence future behaviors—*creating better outcomes for a better tomorrow*. Voyant CDI addresses the challenge of time-sensitive complex decision making requiring multiple streams of rich data. Voyant CDI is not a 'flat' mapping or a two-dimensional complex event processing technology. The platform addresses dynamic-to-

dynamic, multi-dimensional, highly scalable real-time and historical analysis. Voyant CDI facilitates industry specific data streams and rules on a multi-tenant platform, enabling rapid implementation via 'smart cloud' deployments. Import your own data files, or use our existing live and static streaming data sets, to create real-time rules for monitoring and processing spatial, temporal, contextual and attribute-rich data.

### GET A LIVE DEMO

Let us show you how to intelligently process, make decisions on and issue alerts leveraging highly dynamic live and historical data. Give us a call at (703) 778-3500 to schedule a demo.

### ABOUT TRANSVOYANT

In a data-driven world, TransVoyant solutions and services drive visibility and clarity to support smart data-based decisions. Our applications transform multi-dimensional data into problem-solving intelligence, providing for enhanced business and mission success.
