World Class Building, Power and Energy Solutions

Our goal is to deliver outstanding value to our clients as a specialist manufacturer and independent supplier. We aim to secure our client's electrical power supplies, reduce their energy usage, and optimise their total costs of ownership. This 'mission' is a testing-board for every decision we make, so that our company can create a secure, ECO-friendly future for all our stakeholders.

Solving Power Problems

The Thamesgate Group can help you solve the problems of rising electricity costs and instability within the electrical supply grid.

- **Power Protection to keep your business running**
- **Energy Management to reduce your energy costs**
- **Renewable energy to generate on-site power**

We supply uninterruptible power supplies and generators to some of the UK's leading datacentres and IT-based operations. Retailers and hoteliers reduce their energy costs using our voltage optimisers. We are MCS-certified and supply solar powered systems for local usage, energy storage or export to the grid.

Single Source Power Projects

The Thamesgate Group offers a unique approach with one of the highest customer satisfaction levels in the industry. We work with World Class partners and use 'in-house' teams to ensure we deliver site-specific power and energy solutions. At our UK facility we manufacture a wide range of accessories including: battery packs for energy storage, battery transition boxes, UPS maintenance bypasses and LV switchgear.

Our power and energy consultants are trained to the highest standards. The entire operation is geared to help you save money, solve your power problems and contribute towards a more eco-friendly environment.

Energy costs have risen 20% in 3 years. Voltage Optimisers can reduce your energy spend by 12-20% (on average), with a typical Return on Investment within 3-5 years.

Power Protection

- UPS systems to 6MVA - servers, comms rooms and datacentres
- Standby power generators - diesel, LPG and ECO fuels
- Voltage Stabilisers and Conditioners

Energy Management

- Voltage Optimisers to 6MVA - domestic, commercial and industrial
- Smart Meters, Energy Monitors and Intelligent PDUs
- Power Factor Correction

Renewable Power

- Solar PV systems, solar and LED lighting
- Off-Grid Energy Storage systems up to 24 hours
- Fuel Cells
