Battle for Ultimate Power with Denger Chronicles

Denger Chronicles features hours of solo and social gameplay that is highly entertaining for both the manga lover and casual player.

A player must first choose one of the four warring families: ninja, fantasy, robot and school. Then they can customize their characters for the battles to come. Once set, each character's card then participates in spectacular fights. Sagas and battles change based on each player's unique warriors.

Denger Chronicles takes advantage of the touch interface, powerful processing speeds of Intel Atom processors and high-resolution screen in new Windows* 8.1 tablets to create a highly interactive and entertaining gameplay. Denger Chronicles features:

Customization

Since the player deck is not randomly selected by the system, each card can be customized in detail. This allows warriors to improve their skills and evolve.

Strategy

Unlike traditional trading card games, Denger Chronicles contains elements of strategy that are often found in role-playing games. The management and strategic features in Denger Chronicles makes the game experience more engaging and immersive.

Clash

The Mangatar team created a highly innovative fight mode that incorporates manga comic style of fights. Plus, the chronological storage of events is included in a custom album similar to a comic timeline.

Social Play

Denger Chronicles allow players to battle each other. Soon the game will feature "covens" and group fight modes, which are rarely seen in card games.
