

## It's all about the meaning

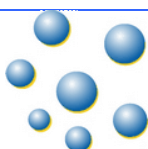

Oxygen Forensic Suite offers several statistical analysis tools giving forensic specialists the ability to quickly reveal activity of the devices owners as well as social connections between users of mobile devices under investigation and their contacts.

A graphical chart is available to display user activities for selected periods of time. The chart allows grouping all possible mobile device events over different time intervals (from one second to one year) and filtering them by various parameters.

The chart enables forensic experts to easily analyze detailed activities of a single contact or group of contacts at a glance.
