

# HIPAA audits are coming.

Will you be ready?

## Ensure compliance and avoid fines for less than 1% of your annual incentive payments

Compliance with HIPAA standards is now mandated for healthcare providers, but many organizations lack the expertise and training to fully understand the requirements and data security needs. HHS/OCR is gaining the authority and resources to enforce HIPAA on a broader basis, particularly for information breaches, which can result in public admission and significant fines.

HIPAA One was developed based on many years of information systems and healthcare IT security experience to provide a simple and affordable alternative to ensure a successful Risk Analysis to satisfy your OCR HIPAA Security Rule requirements.

Whether you are a small clinic or a larger healthcare organization, HIPAA One provides a simple, yet robust, HIPAA security self-assessment solution for an affordable monthly fee.

“CMS anticipates audits of roughly 18 percent of professionals and 12 percent of hospitals for Meaningful Use compliance in 2014.”

## HIPAA Security Assessments made easy!
