

FOR IMMEDIATE RELEASE

TouchSystems Adds New Sharp Displays to its Touch-Integrated Sharp Line

April 23, 2014 – Austin, Texas – TouchSystems grows its partnership with Sharp with the addition of two Sharp large-screen displays, the PN-U423 and the PN-U473. TouchSystems has integrated the screens with an infrared touch technology that boasts multi-touch capabilities.

Carol Nordin, president of TouchSystems, says, “Our touch technologies are not display dependent. They can be integrated with a number of manufacturers’ screens. We chose to work with Sharp because of their screens’ popularity in the retail and restaurant sectors. That popularity will only grow now that the screens are interactive.”

The two screens, the SH4280I-U3 and the SH4780I-U3, are LED edge-lit, meaning a slimmer depth and lowered energy consumption. The screens also feature excellent image quality with their high brightness and full-HD resolution. Finally, the large-screen touch displays are equipped with a number of attractive components such as expanded connectivity, built-in temperature sensors and speakers, and a fanless architecture that not only helps with cooling but also maintenance. The two screens have been rated for 24/7 operation.

TouchSystems was established in 1996. The company is a pioneer in the touch technology industry. TouchSystems works with its customers to create innovative touch solutions, such as desktop touch monitors, interactive digital signage, all-in-one systems, kiosks, and industrial controls and peripherals. TouchSystems is based in Hutto, Texas and is a certified woman- and minority-owned small business. For more information, call (512) 846-2424 or visit www.touchsystems.com.
