FOR IMMEDIATE RELEASE

AMX Adds Google Calendar & Quick Response Scheduling to Further Simplify Resource Management Suite Experience

Industry's Top Room Scheduling Software Offers Users Even More Options to Boost Productivity and Ease Room Scheduling Requirements

AMSTERDAM, The Netherlands – February 4, 2014 – Expanding on its strategy to create AV solutions focused to support an IT world, at [Integrated Systems Europe \(ISE\) 2014](#), AMX® announced that [Google Calendar](#) is now available as the latest addition to the [AMX Resource Management Suite \(RMS\) Enterprise](#) schedule interface lineup. Google Calendar is a tool used to organize and share events and is widely used by businesses and schools. Integrating it with RMS allows end users to increase their productivity with even more options for smart, reliable and easy to manage room scheduling in corporate conference rooms, K-12 and higher education classrooms, multi-use conference facilities and other venues. To further facilitate a simplified scheduling experience, AMX also introduced its new [Quick Response Scheduling \(QRS\) solution for RMS Enterprise](#) that provides a convenient and cost effective option for viewing specific room schedules directly from any mobile device.

[RMS Enterprise Scheduling Interface for Google Calendar \(RMS-SCH-GGL\)](#) is a comprehensive application that facilitates scheduling, calendaring and room support. The application utilizes the Google Calendar API to communicate with [Google Apps for Business](#). From a touch panel, Google Calendar displays the daily room schedule, appointment details, and offers users the capability to create ad-hoc meetings that are saved to Google Calendar.

(more)

Visitors to the AMX Booth at ISE 2014 also got to experience firsthand, the convenience that the new RMS Quick Response Scheduling solution adds to RMS Enterprise scheduling. Simply by scanning an easily and affordably generated QR code mounted near an RMS-managed room's entrance, visitors can immediately view the room's schedule from their mobile device using any QR code scanning app. This highly effective, low-cost method is the perfect way to increase productivity for any room that lacks a scheduling panel.

RMS Enterprise Scheduling eliminates two major barriers to meeting effectiveness. It assists attendees in locating meeting rooms by displaying the scheduled appointments on a touch panel in the meeting room and adjacent to room entrances. Users can reserve rooms directly from the touch panels by selecting from available free time or extend an existing appointment. RMS also eliminates delays in meeting start times by allowing users to pre-configure their room facilities, eliminating the time typically spent on equipment setup. RMS Enterprise also offers scheduling interface support for Microsoft Exchange® (EWS) and Lotus Domino®.

Availability and Additional Details

AMX demonstrated its suite of RMS Enterprise solutions including the new scheduling interface for Google Calendar and Quick Response Scheduling in AMX Booth 1-F6 at ISE 2014, February 4 - 6 in Amsterdam. The RMS Google Calendar scheduling interface is expected to be available for download from the [AMX Tech Center](#), globally in April 2014. The RMS QRS solution is expected to be available in the US, in April 2014 and expected to be available globally, in July 2014. For further details, we invite you to visit these online resources:
