“I think the biggest feature that sold us on AboutTime was the ease of use, just how simple it was.”

Challenge: With over 250 employees located across multiple job sites throughout the Dallas/Ft. Worth area, KPost Company, a commercial roofer and waterproofing company, found that collecting time and attendance was a “long and tedious process.” According to Tracey Donels the Service Manager for KPost, “we were using paper time cards and at the time we had 5 superintendents reviewing the cards of 200+ field employees every day. Then once all the time cards were approved they would go on to our payroll department. We pretty much had one person whose job it was to data enter all the times each day. That was the only thing that person could do because we had 200 plus employees spread out between 40 time cards a day, and each one had to be hand entered into Timberline. That is all they did, data entry for time cards and paychecks.” Understanding their employee’s time could be put to better use, KPost went searching for a time and attendance solution that would integrate with their accounting system thus eliminating the hours of data entry.

Solution: After investigating several options KPost Company decided AboutTime was the solution that would best fit their needs. “We needed to be able to collect the data remotely and it needed to integrate with our accounting software” Stated Tracey. “I think the biggest feature that sold us on AboutTime was the ease of use, it was just so simple. Not only to collect the information in the field, but to approve and edit. We could get the data out of the field and into our accounting system quickly and easily.”

Benefits: Using the AboutTime Software solution solved the problems paper collection caused. “We were capturing the same information but we were capturing it on paper” said Donels. “It’s taking the same ideas and being able to capture the information much quicker.” Since the implementation of the AboutTime solution, time spent on payroll has decreased significantly, down by 70%. “Our superintendents love AboutTime because they spend less time messing around with time cards and our payroll department loves it because they can import the time cards in minutes rather than taking hours.”

KPost Company is currently using AboutTime for time, attendance, job tasking and is in the process of implementing FormsXPress. “Were looking to catch the information on the roof and not use paper, if something can be automatically uploaded into the system. The more information we have on what we are doing or how our job is going, will help us to run a more successful project and, of course, a more successful company.”
