

# DocPath Fact Sheet

## February 2014

### The Company

DocPath ([www.docpath.com](http://www.docpath.com)) is a Spanish document technology software producer. Founded in 1992 in Madrid, the company currently has two development centers. Its document solutions, apart from having been implemented in many large Spanish companies, are exported to different countries in America, Asian, Europe and Oceania. Its portfolio of international clients includes banks of prestige and first-line enterprises, which all have experimented how DocPath software has simplified the difficult task of designing, generating and distributing their business-critical documents. DocPath also spends a considerable part of its revenue on R&D, key area in its success. The company has received the ISO 9001:2008 certification for excellence demonstrated in Quality Management, covering marketing, representation, installation, technical support and maintenance of information management applications. In 2013, the company also received the ISO/IEC 15504 certification, also known as *Software Process Improvement Capability Determination (SPICE)*.

## DocPath Products

DocPath Areca is the new set of DocPath Solutions based on DocPath Ipanema Technology, the new technological core that represents a revolutionary concept in document management.

The available DocPath Solutions are the following:

**For large corporations:**

- **Remote Office Printing:** for any office network requiring on-demand, real-time print systems, in Web environments.
- **High Volume Docs Generation:** oriented to high-volume –batch- document production of corporations.

- **DocPath for Citrix® XenApp™**: significantly reduces bandwidth requirements for printing superior quality documents on Citrix® platforms.
- **WebDocs Filler**: a user friendly interface for data entry purposes that allows users to generate dynamic Web pages from forms previously generated with the DocPath® Designer tool, the form design module of the solution.
- **WebDocs Generation**: for real-time and easy generation and distribution of business documents via Web.
- **Aspen**: a complete document manager for indexed storage of a company's legacy documents, easy retrieval, online consultations, and online generation based on stored data.

### For SMBs:

- **Business Suite Essential**: Allows companies to easily and rapidly design forms with a user-friendly interface and merge the designed templates with a company's business data to generate high-quality documents.
- **Business Suite Pro**: Similar to Business Suite Essential, this solutions also prints in different formats, generates documents in a wide variety of formats and sends the documents via different distribution channels (email, fax, etc.)
- **Business Suite Industrial**: for designing industrial documents with a professional finish and then print them at matrix and thermal printers.
- **Boulder Suite**: provides companies that are still using the IBM® InfoPrint® Designer tool with a wide variety of advanced features. Organizations can choose to maintain their current production environment or migrate to DocPath.

All DocPath® products and solutions may be extended with a set additional modules that expand their features.
