

FOR IMMEDIATE RELEASE —

Hallco Industries announces the Accelerator™ for their Live Floor conveyor system.

Innovation unloads trailers up to 30% faster.

Louisville, KY (March 28, 2014) — Today at the Mid-America Trucking Show in Louisville, KY, Hallco Industries unveiled an innovative new product called the Accelerator (Patents:) that can unload trailers up to 30% faster. Members of the press as well as valued customers and manufacturers attended the event, which including a working Accelerator demonstration. Jim Rohr, from Ken's Truck Repair in Chebanse, IL, said, "I was very impressed with the speed of the Accelerator and I believe this will give Hallco Live Floors the advantages they need to compete with other trailer unloading systems." At the same event, Hallco also announced their industry-leading 3-year warranty on all i-Series drives.

The Accelerator enables truck operators to quickly unload their cargo, thereby saving time especially for operators with frequent load turns. This technology will be standard on all new Hallco floors moving forward. In addition, trucking companies can also easily retrofit the Accelerator onto their existing units.

From an operator's perspective, the Accelerator is simply a handle that reliably switches from Accelerator-mode to standard mode and back again. Through relentless testing, the Accelerator has shown to be a highly reliable, efficient and effective way to haul and unload a large range of materials.

According to Charley Russell (Sales Manager), the Accelerator offers many advantages during installation and operation such as "no need for new hydraulic parts or hydraulic technologies, seamless integration with the drive. Operators can switch from Accelerator-to standard-mode and back even while unloading."

In keeping with Hallco's continual commitment to innovation, the Accelerator expects to lead the way for reliable, efficient hauling for its many current and future customers. Learn more about Hallco and everything they offer for a smooth unloading system at: hallcoindustries.com.

About Hallco

Hallco Industries, Inc. designs and manufactures a full line of bulk materials handling solutions for trucks, trailers and stationary conveyor/bin systems. The original LIVE FLOORS® systems are hydraulically powered and are comprised of a series of deck slats that move in sequence to both load and unload quickly and completely. Drive units and deck profiles have been designed to cater to customer's needs for lightweight, heavy-duty or leak-resistant uses. Hallco Industries is headquartered in Tillamook, Oregon on the West Coast of the United States with distribution and service centers in North Carolina and Texas.
