

Vision Tablet by E-Ceros Sheds New Light on Retina Screens by Seeing Beauty in Simplicity

Vision is E-Ceros' new 10.1 inch tablet that hones in on visual performance with a superb pixel count that it balances out with a quad core CPU plus a generous slice of internal memory - all at a price that will make you smile from Chinavasion.

Shenzhen, Guangdong

April 15, 2014

Hailing from Southern China's former-boomtown-turned-hi-tech-powerhouse, Shenzhen, E-Ceros is a company that prides itself on looking 'beyond imagination' to put together products that fill gaps in the tech world. With Vision, E-Ceros is making a statement about the affordability of widescreen HD tablets. Vision is an enticing tablet perfectly suited for watching videos and gaming that combines a high end retina-style visual display with quad core power and 16 GB of internal memory.

Not willing to sacrifice anything when it came to visuals, E-Ceros chose to use a retina-style display for its latest product, Vision. "The first thing you notice when you turn on Vision is its rich, vibrant colors," said Rose Li, Chinavasion PR Manager. "The 10.1 inch quad core [E-Ceros Vision tablet](#) is like the perfect portable entertainment hub. It's unquestionably great for videos and movies, plus with 16 GB of internal memory you can store quite a few."

The 10.1 inch tablet also has 1.6 GHz quad core technology paired with 2GB of RAM, which means you can expect smooth sailing no matter what you use it for – streaming videos via Wi-Fi, downloading music, or just surfing the web. Plus the Vision's 16GB internal memory mentioned by Li can be expanded even more using an SD Card of up to 32 GB.

"We are looking at commuters, young professionals, teenagers – people who want a tablet whose price is consistent with its quality, not marked up because of a brand name. As a rule, at E-Ceros we hardly spend any money marketing our products, instead choosing to focus on research and development, sourcing of materials, and quality control. By excelling in these

aspects, we are able to bring you a tablet like Vision that not only has an eye-popping amount of pixels (1920x1200), a quad core CPU and 16 GB internal memory, but isn't going to cost you an arm and a leg either."

Beneath Vision's sparkling widescreen and silver sheen is indeed an RK 3188 Cortex A9 Quad Core CPU that runs at up to 1.6 GHz, which is enticingly powerful. It's the kind of CPU that handles gaming without pause. And with a 10 point capacitive touch screen, users can make use of both hands while playing touch screen games, opening up many possibilities in terms of how you engage with you tablet.

If a company like E-Ceros can provide consumers with a product with such excellent visuals and solid CPU power, people ought to, as a rule, look deeper into the consumer electronics market to try to find the best deal instead of going with what the television. Buying advice aside, the Vision is a cool achievement for E-Ceros, a nascent company. Their contribution to widescreen tablet market will surely be appreciated by savvy consumers who are looking for the next best thing, not just what's popular.

With more than 360,000 satisfied customers shopping from almost every corner of the world, Chinavasion has proven itself to be the destination for [Android tablet PCs](#). To learn more visit the site at <http://www.chinavasion.com>
