TERRAGO WORKGROUPS

SIMPLE, COST–EFFECTIVE ARCGIS®–BASED COLLABORATION FOR SMALL TEAMS AND WORKGROUPS

TERRAGO workgroups

TERRAGO WORKGROUPS: AN OVERVIEW

TerraGo Workgroups is a subscription bundle that brings GeoPDF® collaboration capabilities to smaller groups with flexible, cost-effective plans that meet their unique requirements.

TerraGo Workgroups bundles [TerraGo Publisher® for ArcGIS®](), [TerraGo Composer®]() and [TerraGo Toolbar®]() products together so GeoPDF maps and imagery can be easily updated and shared among all members of a workgroup or organization.

The idea behind TerraGo Workgroups is simple: to make it easy for smaller workgroups and organizations to dramatically increase the value of their GIS systems by opening up GIS data to everyone that needs it, including non-expert users, without requiring expensive, complex software or training.

IS TERRAGO WORKGROUPS RIGHT FOR MY ORGANIZATION?

TerraGo Workgroups is designed for organizations with a known set of users.

CUSTOMER USE CASES

A local state government published maps for millions of citizens but only needs GIS collaboration for a specific department.

A leading engineering firm produces feature-rich maps and imagery for hundreds of employees and partners, but update privileges are only reserved for a few core employees

A commercial real estate company publishes mapbooks for their various developments and distributes them to all contractors and subcontractors. However, only construction managers have the ability to upload data and update information.

These are all examples of closed-loop workflows with all users known.

TERRAGO TOOLBAR

TERRAGO COMPOSER

MAXIMIZE RETURN ON GIS INVESTMENT

- Significantly extend geospatial assets between GIS analysts and mobile field users – even those in challenging geographic environments that lack IT infrastructure.

- Bi-directional flow of information increases use of geospatial data, systems and investments, maximizing the value of these assets by improving data quality, response times, decision making and productivity.

- Intuitive TerraGo Toolbar means non-expert users get access to "GIS-like" features anywhere, anytime without complex, specialized software or training.

SEAMLESS COLLABORATION

Organizations can mix-and-match the number of seats for TerraGo Publisher, TerraGo Composer and TerraGo Toolbar. They complement each other by extending their reach throughout the workgroup.

- *Create: TerraGo Publisher produces advanced geospatial maps and imagery and makes them portable.*

- *Integrate: TerraGo Composer allows users to turn PDF maps into GeoPDF, or quickly compile thousands of complex, multi-layer GeoPDF maps into a GeoPDF mapbook, covering geographic areas ranging from counties to countries.*

- *Collaborate: TerraGo Toolbar provides mobile field workers with the ability to input data for round-tripping to analysts at HQ to ensure information is up-to-date with the most accurate and timely location intelligence.*

GEOPDF

PROTECT YOUR VALUABLE DATA

- *With a closed-loop workflow, TerraGo Workgroups provides organizations with greater control over the geospatial intelligence they create and maintain.*

- *Users can access, update and share location intelligence with a known set of users.*

- *All GeoPDF maps and imagery created by TerraGo Workgroups Publisher are licensed with a unique ID, allowing only users within the defined group to access, update and share compact location intelligence.*
