INTRODUCING CONTENT EMPOWERMENT

In today's data-heavy world, your business needs more than just content management. You need a powerful content empowerment solution. Meet Ras eFolders – your key to content that stops creating work, and starts working for you.

eFolders enables you to capture, store, integrate, and add business intelligence to any file or document in your organization regardless of the format, no matter the department.

This single system acts as a central repository, empowering your documents and consolidating control across the lifecycle of a document. Then, it automates distribution according to your specifications so that your information remains securely archived, yet instantly accessible throughout the organization.

HOW IT WORKS

Any document that is saved or used as reference across the number of platforms in a hospital can be stored in eFolders and referred to in a single click. Using dbtech's API, any document that is needed to support an employee, vendor, or prospect can be linked and allow you to work in that system without searching for any document.

Following are just a few of the departments that can realize significant benefits from eFolders:

Human Resources
- New Employee Onboarding
- Candidate Files

Accounts Payable
- Purchase Orders
- Invoices

Materials Management

Legal & Credentialing
- Security Badges

Its that easy. We've done the work so you won't have to.
