Innova System Port Charlotte, FL.

Today's home buyers are investing in energy-efficient homes that are green, strong and affordable. With all building envelope components engineered and built in our factory to exacting specifications, the Innova fast-track construction system accelerates the building schedule while using less labor which saves the building Owner time and money!

#### Expand Your Product Line

We can work with your design or ours. Innova Eco Building Systems offers dozens of energy-efficient designs for single, multi-family and light commercial buildings.

#### Accelerate Your Cash Flow

Go from slab to dry-in in a matter of days, not months! A four-man crew following a standardized workflow can assemble the precisely engineered kit components in as little as three days, depending on their skill level and the complexity of the home kit purchased.

#### Increase Your Profitability

Whether you build one home or 1000, using the Innova Panelized construction system will not only cut the cost of construction, but it will also dramatically lower the operating and maintenance costs over the useful life of the building.

#### The Innova Difference-Reduced Electrical Cost

A home or commercial building constructed with the Innova building envelope will cost much less to maintain. Our building materials are Eco-Friendly "Green Building" building materials. Your Innova building kit can qualify for Leed, Green Building and PATH certifications. In addition to all of these benefits, your Innova Building will continue to save you money long after your purchase as one of the most dramatic cost savings are realized in energy use. Because of its extraordinary insulation ratings, innovative air-tight design and efficient engineering, a building constructed with the Innova building envelope will use 30 to 70 percent less electrical consumption over the useful life of the building. This is a substantial savings over 30, 40, 50 or more years of reduced electrical consumption and energy savings.

#### Innova Manufacturing

We have one of the most modern, automated SIP's manufacturing facilities in the world. We know what it takes to create structures that can withstand the elements including hurricanes and earthquakes. Our structures are designed to perform under pressure, without sacrificing energy efficiency, comfort or ease of construction. Since all Innova building components are engineered and manufactured in our factory to exacting specifications, the Innova fast-track construction system not only reduces waste, but greatly accelerates the building schedule while reducing labor requirements for construction.

#### An Innova Home is a Healthy and Safety home for your family!

- Innova MGO SIPs Walls will stop fires from spreading from interior to exterior and exterior to interior walls for added safety of your family.
- Highly energy efficient, reducing power consumption cost
- Solid durable construction system that results in fewer thermal breaks.
- The Innova Panel means a smaller HVAC system which will lower construction and utility costs.
- Innova Panels are mold and mildew resistant.
- Innova Panels are resistant to insects and termites.
- Innova Panels are an extremely low VOC emission building material (no off gassing).
- A green building technology—less waste on the job site
- Reduced carbon footprint construction system.
- Excellent performance in cold weather conditions.
- Exterior Innova panels can be painted or finished with a variety of exterior finishes such as stucco, brick stone veneer, and vinyl siding.
- Innova panels are available in various thicknesses to suit the needs of your project.
- Electrical wire chases are provided in the Innova panels for easy installation of electrical wiring in the field
- Innova buildings can qualify for Leed and Florida Green building Certification.
