

Net Access Expands FLEXSecurity's Services Portfolio With Launch of Fully Managed DDoS Service

CEDAR KNOLLS, N.J. [May 12, 2014] – Net Access, a leading colocation, cloud and managed services provider announced today the expansion and immediate availability of "Analytics and Monitoring with DDoS", a fully managed distributed denial-of-service (DDoS) attack identification, alerting and mitigation service.

The DDoS threat landscape continues to evolve rapidly with an increase in the number and sophistication of malicious cyber attack methods utilizing NTP and other protocols. According to Arbor Networks, NTP (Network Time Protocol) global traffic increased from 1.29 GB/sec in November 2013 to 351.64 GB/sec in February 2014 with the USA being one of the top targets for large attacks leveraging NTP.

Net Access' centralized cloud-based Managed DDoS Mitigation Service enables organizations to consistently stay one step ahead of the DDoS threat and enhance their approach to network security and service availability protection.

Net Access **FLEXSecurity's** Analytics and Monitoring with DDoS Service combines Net Access' DDoS expertise in networking and security with cloud-based Analytics, Monitoring and DDoS infrastructure, offering enterprises total protection with:

- Rapid response with 15 minute activation SLA
- 24x7 managed DDoS threat monitoring and mitigation activation by Net Access's NOC
- Superior border protection with early warning DDoS advanced finger print recognition technology
- Detailed traffic profiling and reporting for over 90 IP-based applications with configurable alerts

"Since earlier this year, our NOC has seen over a 70% increase in DDoS related issues with new occurrences impacting customers daily," said Dan Spataro Net Access VP of Engineering. "This can be credited to an acceleration in DDoS attacks and is a clear indicator that DDoS protection is no longer a luxury but a necessity for our customers."

With nearly ten years of experience successfully defending customers against DDoS attacks, the introduction of FLEXSecurity's Analytics and Monitoring with DDoS Service and its supporting infrastructure enables the company and therefore its customers to stay ahead of evolving threats leveraging the latest mitigation techniques.

Net Access FLEXSecurity's Analytics and Monitoring with DDoS is the first service to be launched as part of Net Access's portfolio of flexible, fully integrated managed services.
