

BLACK DIAMOND REFINISHING

PRESS RELEASE

For Immediate Release

Black Diamond Refinishing helps people put the effectiveness of a body shop in the palm of their hands with its Black Diamond Wipe-On-Clear-Coat product. It is an easy do-it-yourself way to care for the exterior damage of your vehicle. Black Diamond Refinishing does not offer gimmick products rather the products offered are the same used by body shops but are specially designed to be do-it-yourself user friendly.

Atlanta, Georgia (May 12, 2014) — Black Diamond Refinishing started in 2004 as a company that put the body shop on wheels bringing full service body and paint repair to peoples door step. Over the years it was noticed that a large number of damages did not require full service repair but rather a simple repair was enough, products that Black Diamond Refinishing now offers in their online store.

The products offered by Black Diamond Refinishing also allow companies that offer automotive repair services to offer additional services to their customers. For example detail shops, car dealerships, body shops, mobile car repair companies and other automotive service providers are able to have additional services to care for their customers and increase profits.

The main product offered by Black Diamond Refinishing is the “wipe-on-clear-coat” this product is the same type of clear coat used by body shops and that’s currently used on most vehicles today. However, our clear coat is specially designed to be wiped on by hand rather than sprayed on. It allows for a brand new clear coat to be applied to the vehicle, filling in scratches and bringing luster to the finish. The few other types of wipe on clears on the market use a gel coat which can make it difficult to evenly distribute and makes for an ugly finish — but, at Black Diamond Refinishing, we know that your vehicle finish is everything. Therefore, in addition to our wipe-on-clear-coat we also offer a “scuff and sap remover”. This product removes scuffs from unfortunate events that leave unsightly marks as well as road debris or other environmental damages such a sap without harming the existing finish on your automobile. Other products such as lacquer thinner and solvents can damage the paint and lead to costly repairs.

The purpose of Black Diamond Refinishing products is to provide an inexpensive and easy do-it-yourself means to care for minor to medium automobile paint damages, those damages that really do not require a full service body shop repair. Of course Black Diamond Refinishing products are not miracle products; so then, the damage on a vehicle may be extensive enough where a full service body shop repair is necessary. However, to care for the ones that do not require such an expense Black Diamond Refinishing provides the solutions putting the body shop in the palm of your hand.
