intelliview nXt

Welcome to the world of user driven reporting!

Intelliview NXT is the first enterprise reporting solution focused solely on empowering both non-technical and tech savvy users with "business insights" from their data without placing ANY overhead on IT teams.

It addresses the most fundamental challenges that USERS and IT TEAMS face with information, every day:

- Dynamic business situations – Users need "real time" answers to "real time" questions without having to wait for access to data or report changes
- Lack of flexibility – Users need their reports to be "purpose built" to meet team / user specific needs
- IT effort – IT teams need to be freed from the constant overhead of meeting user specific or business situation specific needs

Intelliview NXT addresses all 3 challenges comprehensively by delivering Interactive Reports and Personalized Business Insights, while Minimizing IT Effort.

Interactive Reports

Intelliview NXT enables users to adapt reports and interact with their data to meet dynamic business situations with ease and without requiring any additional IT effort. Its intuitive user interface ensures that users can get answers to any question posed by a dynamic situation with little or no training.

Personalized Business Insights

Intelliview NXT takes report personalization to a whole new level, enabling users to design their own reports!

It also enables users to take any existing report and make it their own by adapting and personalizing the report to suit their specific business needs.

Minimizing IT Effort

As the focus on enabling users to meet dynamic information requirements and team / users specific needs increases, so does related IT effort. More often than not, a metric that was not pertinent to a user's report gets prominence due to a change in operational priorities and reports need to be updated or redesigned to reflect this change. This happens often enough to create a significant overhead for the IT team on an ongoing basis.

By empowering business users to interact with their reports and create their own personalized information needs, Intelliview NXT significantly reduces IT effort team by eliminating unproductive time spent with report creation and modification. Intelliview NXT Instead lets them focus efforts on more strategic and long term IT priorities.

## Key Functional Areas

Interactive Visualization

Intelliview NXT provides an intuitive interface that enables users to interact with and modify their reports based on different business situations with little or no effort.

This enables users to focus their attention on answering the questions they have rather than figuring out how to use the reporting interface to get to the information they need.

Comprehensive Dashboard & Report Support

Intelliview NXT is designed meet the most extensive information needs. Its reporting capabilities deliver user driven & flexible Ad Hoc Interactive reports, fulfil the stringent design requirements of Standard Reports and everything in between!
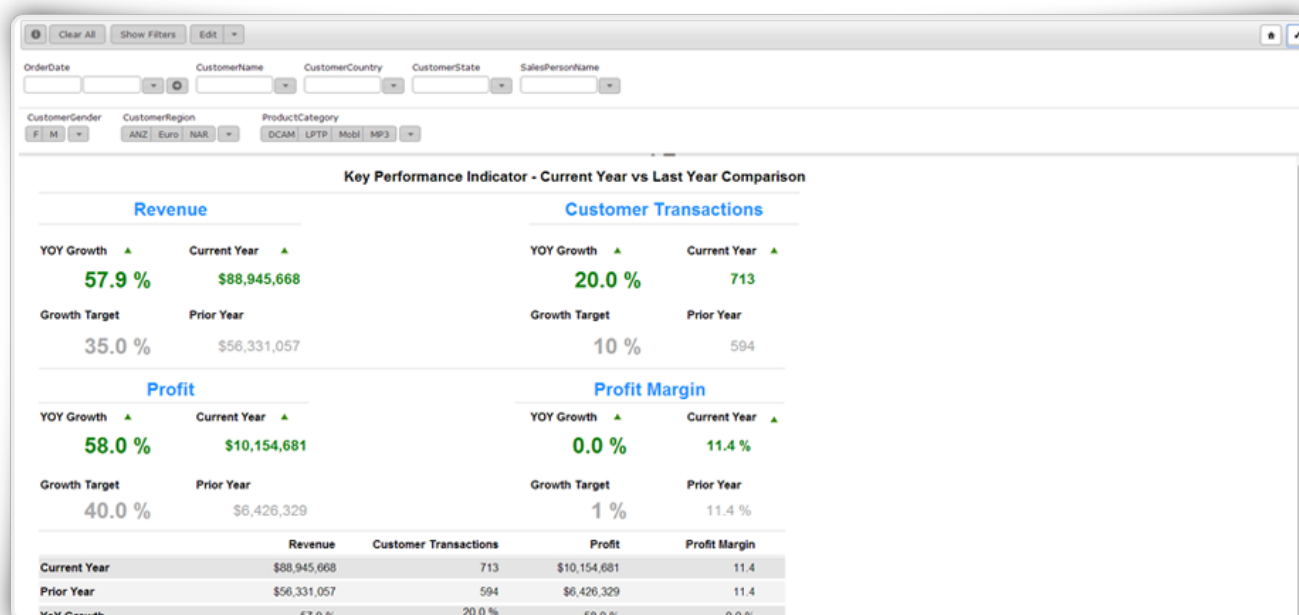

Dashboards

Reports　　　　　**Hybrid Dashboards**

Product of
Synaptris

Dashboards

Interactive Dashboards are been designed to accommodate the needs of both power users and business users. It enables power users to design Ad Hoc Dashboards and also create variants associated with the main Dashboard by using multiple combinations of parameters as well as different business metrics. The user interface has been designed with non-IT users in mind. All display items are simple to understand and allow users the maximum flexibility.
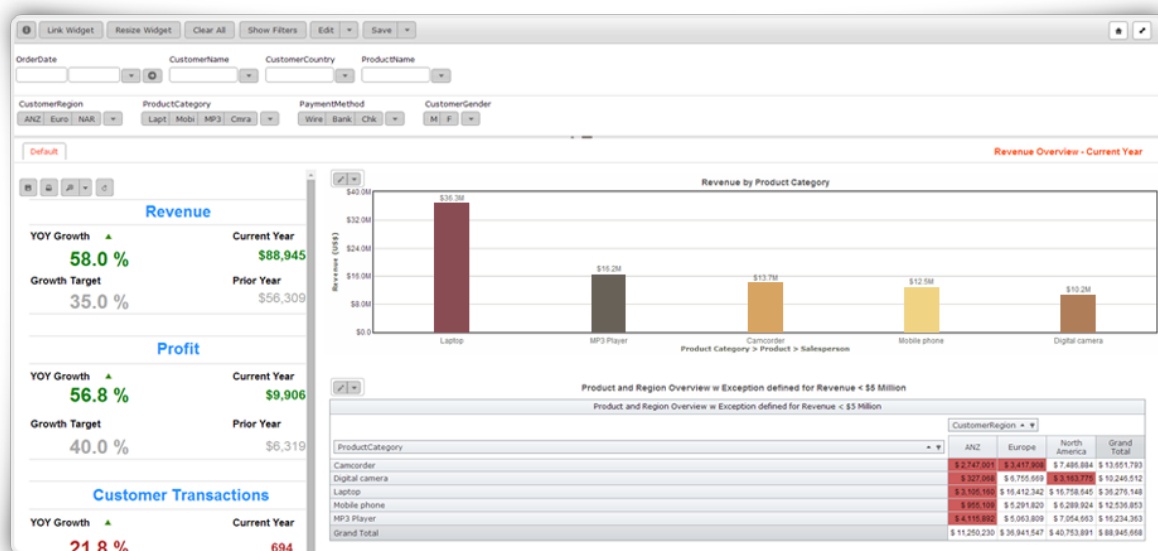

Reports

While Dashboards provide extensive value to end users, they still need Standard Reports to meet a variety of every day information needs. Some examples are regulatory reporting, production reporting such as forms, statements and invoices, pre-defined report templates such as project, progress or status reporting and any other reporting need that places stringent requirements in terms of pixel perfect design.

The Intelliview NXT Report Designer enables tech savvy users to design reports either by connecting to a local database or to a server resident database. On completing report design, reports are easily published to the web based Intelliview NXT Reporting Server.

Hybrid Dashboards

Hybrid Reports in Intelliview NXT provide an integrated report environment that makes it possible to combine Interactive Reports and Standard reports into a single report. Any parameter that is applied to the hybrid report updates the widgets and the standard report objects within a hybrid report making it very easy for users to manage their hybrid reports.

Integrated Search

"Search" is second nature to business users and Intelliview NXT's integrated search capability adds significant value to the user experience.

Intelliview NXT makes it possible to use search terms to filter their reports and instantly isolate just the information they need.

Exception Reporting

Intelliview NXT gives users the ability to define exception conditions for one of more business metrics in a report, which are highlighted when they view the report.

This enables users to monitor their business based on each exceptions tailored for each user's individual priorities, rather than spend time discovering these exceptions or analysing data.

Business Alert Monitoring

Users are also able to define exception conditions for which they need to be proactively alerted without the need for them to view a report in order to discover that an exception has occurred.

Intelliview NXT enables users to define exceptions that they need to be notified of via email.

Multi Tenancy/Cloud enabled

Intelliview NXT supports multi tenancy as part of its core architecture. This architecture provides customers the ability to deploy Intelliview NXT as in a private or public cloud environment and provide independent instances for multiple entities / communities depending on the business need.

Broad support for Data

Intelliview NXT ships with support for all the major RDBMS systems out of the box. The supported databases are MS SQL, MySQL, Oracle and DB2. Customers can get support for other databases such as Sybase or Progress using a cost effective certification program.

Intelliview NXT offers direct support for Excel Data templates for ongoing management by business users and Cube support as add on modules.

Mobile Reporting

Intelliview NXT delivers a cross platform mobile experience by enabling users to not just access but also interact with reports using both iOS and Android devices.
