

Implementing an 11-Step Plan for Device Software Validation and Verification

Table of Contents

Introduction	
Creating a Validation and Verification Plan	5
Step 1: Perform Risk Analysis	7
Step 2: Determine Level of Concern	7
Step 3: Describe the Software	8
Step 4: Formulate Requirements Specifications	9
Step 5: Develop Design Specifications	9
Step 6: Create an Architecture Design Chart	10
Step 7: Craft a Software Development Environment Summary Document	11
Step 8: Document Validation and Verification Testing	11
Step 9: Perform a Traceability Analysis	12
Step 10: Determine Unresolved Anomalies	12
Step 11: Maintain a Log of Revision and Release Numbers	12
Implementing the Software-Specific Validation and Verification Plan	17
Documentation Sources	18
Four Types of Software Validation and Verification	19
Critical Activities	20
Test Cases and Scripts	21
Incorporating Software Validation and Verification into the Master Plan	23
Risk-based Approach	24
Life-cycle Model Considerations	25
The Validation Package	25
Including Part 11 in the Master Plan	27
Regulatory Underpinnings	31
International Standards	32

Appendices.....33

A. 21 CFR Part 11

B. FDA Guidance for the Content of Premarket Submissions for Software Contained
in Medical Devices

C. FDA Guidance on Radio Frequency Wireless Technology in Medical Devices

D. GAMP 4 and 5 Table
