Designed for the Modern Workplace

MVMT is a global collaboration between BioFit Engineered Products and Studio Fifield in Milan, Italy. Led by the internationally recognized designer Bruce Fifield, Studio Fifield adds a decidedly European perspective to the BioFit tradition of rugged durability and high-tech compatibility. Designed to make a statement and built to meet your needs, MVMT is a chair that catches your eye, responds to your touch and reminds you time and again why you chose it.

Built for Your Body— at Rest and in Motion

With its weight-activated control, MVMT not only adjusts to the user's movements, but it also automatically fine-tunes itself to users of various sizes and weights, sensing their individual support needs from the moment they sit down and providing synchronous backrest and seat movement, plus maximum ergonomic support. MVMT also offers the ability to lock out any movement in the chair that could interfere with the most precise work.

Engineered for Durability Inside and Out

Like most BioFit products, MVMT features a 13-year warranty. That means you can depend on your MVMT seating in tough workspaces for years to come—and ensure the same clean room, ESD and other critical environment specifications as a brand-new MVMT. Each MVMT component has been tested and verified to meet or exceed BIFMA standards for durability.

Movement.

Essential to ergonomic well-being.
Integral to workforce productivity.
Central to responsive engineering.

MVMT™

Movement. Simplified.

Our workdays may be spent sitting, but we're anything but still. We're in constant motion—leaning forward, reaching back, stretching and turning. We need a chair that moves with us, helping ensure worker productivity and ergonomic well-being while delivering reliable quality.

MVMT from BioFit makes movement even simpler. MVMT is the culmination of countless hours spent observing users across a range of applications worldwide—and listening to their needs—for a truly responsive line of seating solutions.

Adjustable Controls and Ergonomic Support

The right ergonomic seating meets you wherever you are—and can adjust to wherever you move. MVMT offers a wealth of features that ensure full adjustability from top to bottom and back to front. Plus, MVMT is built to accommodate standing workstations, which are often 38" and taller.

Backrest forward adjustment. Independently allows for even greater control of backrest placement

Backrest height adjustment. Quick, quiet adjustment with the push of a button

Weight-activated control. Automatically adjusts to each user with synchronous backrest/seat movement

Micro-tension control. Allows fine-tuning of recline tension for the individual

Armrest adjustment. Height, width and depth can be adjusted, then locked to support manual tasks

Control lockout. When work is so precise that the tiniest movement could spell disaster, MVMT gives you the power to lock down your adjustable features

Seat slide. 2.5" adjustment to accommodate individuals of varying leg length

Forward seat tilt. Ideal for forward-leaning tasks

Seat height. Multiple ranges for working heights from desk height to standing

Footring height adjustment. 22" diameter footring slides easily, holds positively and stays put

Resistance casters. Featuring a semi-soft tread that won't roll away easily

Easy to Clean and Ready for Demanding Environments

In today's clean room settings, even a microscopic particle can stand in the way of progress. Seating in these environments simply cannot generate dust and particulates, and it must be easy to keep clean.

Clean room specified.
All the way to ISO Class 3 (Class 1)

Upholstered backrests.
Featuring plastic covering and enclosed height adjusting systems

Reinforced plastic backrest bar.
Cleanable without corrosion*

Housing covers.
Clips into plastic seat housing, limiting exposed areas*

Rubber shield.
Encloses the control in a hermetically sealed system. All ergonomic adjustments can still be made and the chair can still be cleaned without the worry of corroding the controls*

Cast base and adjustable footring.
T-shaped construction for easy cleaning

Hooded casters.
Prevent dirt from entering the environment as the wheels turn
