Flood Underwriting

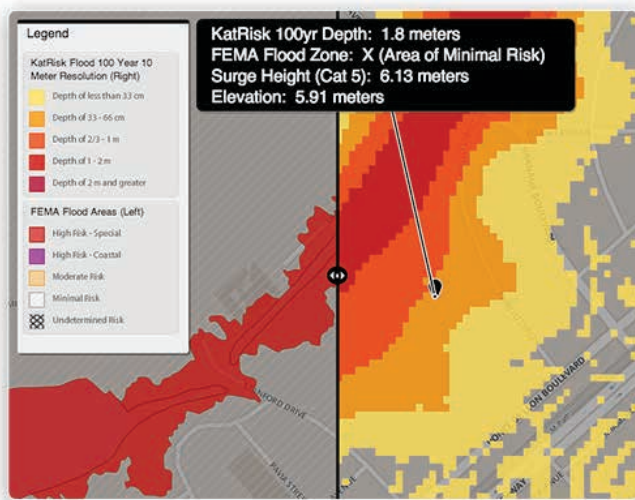

SpatialKey's Flood Analyst application enables insurers to monitor and mitigate flood accumulations worldwide. You can quickly take action with new risk intelligence delivered via speed-of-thought analytics and intuitive visualizations. You are empowered with the ability to identify new risk management opportunities and calibrate your underwriting strategy, giving you competitive advantage. Write with confidence, identify underserved markets and capture adequate premium in areas where your competitors lack understanding.

With seamless access to hazard maps from expert sources, like **KatRisk LLC, JBA Risk Management Limited, FEMA and NOAA**, you can develop a holistic view of flood risk, identify adverse concentrations and provide transparency into riverine, coastal and surface water hazards. You can instantly see how flood contributes to your book of business with a visual assessment and quantification of localized risk, bringing focus to your analysis.

You can readily compare modeled views at the portfolio level and drill-in to understand differences in views at the location level. With Flood Analyst, you now have choice in model vendors, enabling you to develop strategy using a blend of the best science available and to evaluate risk holistically by augmenting views with complementary data sources.

Flood Analyst allows you to evaluate your current portfolio exposures and claims history to optimize your use of available capacity and to inform how flood model data can be leveraged pragmatically at the point of sale, enhancing underwriting profit and minimizing the cost of claims. You can put your analytics into action across your organization with the ability to collaborate and communicate your insights using SpatialKey.

With SpatialKey's unmatched ease-of-use and intuitive visualizations, you can proactively monitor portfolio position, accelerate formulation of risk mitigation strategy, and maximize competitive advantage and underwriting profit through advanced risk selection.
