Entrada Unveils Mobile Documentation Platform with ExpressNote Dictation, Mobile Image Capture and Patient Clinical Display

ENTRADA'S NEW MOBILE APP EMPOWERS PROVIDERS TO ACHIEVE BETTER WORKFLOW EFFICIENCIES AND IMPROVED DOCUMENTATION QUALITY

NASHVILLE, Tenn., June 17th, 2014 – Entrada today unveiled its new mobile documentation platform, the most significant release in the history of the company and a glimpse into its future for creating provider-focused productivity tools that improve efficiencies for caregivers and quality of documentation. Expanding beyond its core ExpressNote Dictation feature, Entrada's mobile app now enables providers to capture and send images directly to their clinical system as well as access critical patient data synced in real-time from their EHR - all from their mobile device. Entrada also completed a beautification process, introducing a sleek and more intuitive user interface that simplifies the mobile experience for its provider base.

"Our providers are already using Entrada extensively throughout their days in clinic. With this release, we're empowering them with an easy way to access the critical patient information they need to make improved documentation and care decisions," notes Rob Trumble, Chief Operating Officer. "We've also radically simplified the process for capturing and delivering images back to the provider's clinical system. Snap a photo, click send, and Entrada handles the rest. It truly is the easiest way for providers to manage and share clinical images."

Many caregivers value the convenience of using their mobile device cameras to take clinical images of their patients, often bypassing mandated security protocols and exposing themselves and their practices to potential HIPAA violations. With Entrada's Mobile Image Capture, providers can now capture patient images from their mobile device and transfer these images securely to either a patient chart within their EHR system or other shared network. With Entrada, providers and staff no longer face the challenges with transferring images that force many to adopt manual workflows fraught with inefficiency and error. Mobile Image Capture enhances the quality and robustness of patient documentation while improving the productivity of the organization.

With Entrada's Patient Clinical Display, providers now have an incredibly simple way to access accurate, real-time patient information - from anywhere, at anytime – from their mobile device. Entrada syncs directly with the provider's EHR system to actively pull key patient information (e.g. Medications, Allergies, Problems, etc.) without having to be logged into an EHR system or tied to a workstation. Providers can even view this critical information while dictating, giving them the added visibility necessary to avoid dictating duplicate information while improving the quality of their notes.
