

revocharge™

Sync.Charge.Be Happy

Hello!

The Revocharge is a revolutionary conductive battery case for iPhones and Androids. Utilizing patent-pending technology, Autosense, the Revocharge smartly and intuitively charges your phone to reach maximum potential.

Cemal Samsilova created Revocharge when he realized there was a major lack in the market for a fully efficient charging device for smartphones. Other wireless chargers are slow and less effective because they use inductive charging. Samsilova utilized his skills and knowledge attained from previous positions at IBM and Lockheed Martin to realize his dream product.

The Revocharge will launch on Kickstarter to raise funds for the first production line including desk mount, armband, car mount and detachable battery.

Enclosed is information to educate and answer any questions on the Revocharge features, history, product line and media contact.

Free yourself from wires Get Charged and Synced ... Everywhere

You and your phone are always on the go. As your constant companion, your phone is by your side in the office, on the road, and in the middle of nowhere, keeping you connected. But what happens when your battery dies or you need to sync data? Suddenly your mobile phone isn't so mobile.

Until now.

Company Profile

Revocharge, is an innovative technology firm located in Northern Virginia – just outside of Washington, D.C.

Our mission is to bring new technology to the market through inventions and products that people actually need and want to use. The Revocharge team is comprised of thinkers and doers who work together cohesively to turn our bright ideas into your bright future.

About Us

Cemal Samsilova is the Founder and CEO of the Revocharge patent-pending smartphone case that allows users to sync and charge their phones whenever and wherever they want. Revocharge is designed to fit iPhone's and Androids, and has received full Made for iPhone (MFI) certification.

The Revocharge case is ultra-thin, yet remarkably durable, and connects to the Revocharge charge and sync universal mount, allowing users to sync and charge their phones at their desk, in their cars, or in the middle of nowhere.

Built with Autosense technology, Revocharge adjusts to a device's needs, meaning it can provide optimum charging to any smartphone.

Born From Innovation

Revocharge was born from the imagination and ingenuity of Samsilova. With experience working for Lockheed Martin and IBM, Samsilova has long been exposed to environments that fostered creativity, technology and innovation. Samsilova decided it was time to use his valuable experience to work, and began creating the foundations for Revocharge.

The Creation of Revocharge

While Samsilova has brainstormed and created other innovative and useful products and tools, Revocharge is particularly near and dear to his heart.

“Samsilova was tired of having to stay connected to cables and cords in order to avoid being disconnected from friends, family, and colleagues.”

Like most 21st century people, Samsilova finds himself on the road often. And like most people, he gets frustrated at how often his phone is low on battery or even dead. Outlets aren't always nearby. Cords and cables break,

get lost or are even stolen. In an ever-growing mobile world, it dawned on Samsilova that his smartphone wasn't really all that mobile.

Missed calls. Lost photo ops at family gatherings. Missing out on what mattered most in his life. Finally, Samsilova had enough.

Solution

There had to be a way for him to remain connected to the important people and moments in his life, without having to remain connected to cables or cords.

After thorough research, Samsilova realized the tool he needed wasn't on the market. So he did what any innovator does – he got to work inventing it.

Samsilova's goal was to create a power source that lasted long enough – no matter the smartphone – and could be reused over, and over again.

Enter Revocharge

Revocharge is a patent-pending smartphone case that allows users to sync and charge their phones whenever and wherever they want. Connecting to a universal mount through the power of magnets, Revocharge is easy to attach, and detach, to your desk mount, car mount, arm band or belt clip.

It's designed to make it easy for users to take their iPhone's or Androids with them, anywhere in the world, without ever having to worry about losing battery power or data. Simply attach the Revocharge battery to the back of your case, and your phone will receive a full charge – at optimum speed, without your ever having to touch a cable.

And thanks to a micro USB input built into the Revocharge case, you can easily sync data (like music and apps) while charging your battery and phone). *Stay connected while your phone is disconnected.*

When you think about it, mobile phones aren't so mobile. These days, smartphones eat up battery power faster than their archaic predecessors, meaning unless you're near a power source, you won't survive the day without "plugging in."

With Revocharge, you never have to worry about plugging in again. Connect your smartphone to your Revocharge battery pack, and give your smartphone its second wind, and a new lease on life.

Introducing the Revocharge lineup

Apple iPhone 5 5S Case

Sync and charge your iPhone while keeping it fully protected. Our iPhone 5S case is designed to meet the MFI (made for iPhone) licensing, and gives you the power to use your iPhone to the fullest. Get consistent full charges. Easily sync your data and attach your phone to car mounts, arm bands and your desk mount. Use your headphones. Revocharge protects, but never slows down, your iPhone.

Universal Battery

So much power packed into such a tiny product. The Revocharge battery is designed to seamlessly snap onto your Revocharge phone case, and give your phone a full charge, thanks to its built-in Autosense technology. Batteries are easily interchangeable and can be charged on your desk mount at the same time you charge your phone.

Universal Desk Mount

Desk mounts have never been so revolutionary than with Revocharge. Introducing your one-stop charge-and-sync solution for your entire family. Sync and charge all your phones and Revocharge batteries without added cables. Less mess and headaches, but the same power and freedom. Revocharge has you covered.

Universal Sync and Charge Desk Mount

Universal Car Mount

Drive safe and in style with the Revocharge car mount. Our universal charge car mounts don't just make it easy for you to keep your phone in view, but they also allow you to charge your phone at full speed. Secured by a heavy duty suction cup and earth magnets to keep your phone in place, Revocharge's car mounts will never let you down.

Universal Arm Band

Whether you're on a run, in the gym, or just looking to get your phone out of your pocket, the Revocharge arm band is your answer. The Revocharge arm band is made of a comfortable stretch elastic and is designed to hold most smartphones. Secure your phone with ease using our revolutionary earth magnets, which make it easy to remove your phone when you need to.

Universal Arm Band

Universal Belt Clip

Phones have gotten smarter and better looking, but belt clips sure haven't, until now. The Revocharge Belt Clip is nearly 1/3 the size of traditional clips, and secures to your phone with earth magnets for easy alignment. It's time to modernize your belt clip into the 21st century.

Samsung Galaxy S4 Case

The Revocharge s4 phone case secures your Samsung s4 smartphone in style, while allowing you full access to sync and charge your phone when you want. Designed to give you the most freedom of any case on the market, our s4 cases allow you to use your headphones, sync data and attach your phone to car mounts, arm bands and your desk mount.

How does Revocharge work?

Imagine never missing that treasured moment because your battery died. Imagine never having to worry about misconnections or missed calls, because your phone was always charged. Revocharge is a protective phone case designed to charge and sync your smartphone “on the go.”

What is Revocharge?

Revocharge is a patent pending universal, full-speed charge and sync mount that secures your phone through an inner-locking mechanism, and reinforced with magnetic power.

It’s versatile, sleek, and gives you the power to charge and sync, whenever, wherever, and however you want. With Revocharge, you’ll never miss a call, photo, or a chance to connect with friends, family, or colleagues.

Made for iPhone

Revocharge is designed to work with iPhone 5 and iPhone 5S models and have received initial product plan approval from Apple, and is eligible to receive its complete MFI (made for iPhone) licensing approval - upon submission of its samples to Apple - affirming it is in compliance with Apple’s strict guidelines for product releases.

Slim and trim, but built to last

Revocharge is an ultra-thin 13.4mm width protective case, designed using poly-carbonate material to provide unparalleled durability, despite its lightweight appearance.

Optimized for your smartphone

Every phone case is equipped with Autosense technology, making Revocharge capable of optimally charging various devices, from iPhones to Androids.

Autosense technology automatically adjusts to a device’s need for optimum charging. This simple, all-in-one solution makes the Revocharge the most versatile wireless charger on the market.

No more cables

With Revocharge, you never have to worry about buying expensive charge cables to stay connected, or replace the ones that inevitably break. Sync and charge your phone without the cord. You’ll never feel so free.

Full charge at full speed

Other wireless chargers on the market are slower, and less effective. They use *inductive charging*. Revocharge uses straight pin-to-pin connections, or *conductive charging*, meaning your phone will charge like it's plugged in a wall outlet (even though it isn't).

The power of magnets

Revocharge features a powerful magnet that allows the case to easily attach (and detach) from your desk mount, car mount, arm band or belt clip.

Revocharge locks into place, so you never have to worry about your phone sliding out of place.

On the Go - Never Slow

Revocharge phone cases feature a removable battery that attaches to the case using a pin-to-pin connection. The battery contains a micro USB input, allowing you to charge both the battery, and your phone, simultaneously, while syncing data such as music and apps.

The moment you snap the Revocharge battery to the back of the case, the phone will begin to charge immediately. The LED lights displayed on the battery monitor the charging process. Once your phone is fully charged, you can remove the battery and recharge it for later use, or keep it on your phone and charge both battery and phone - simultaneously - the next time you're near an outlet.

Backup and Stay in Sync

Revocharge features a micro USB input, allowing you to sync your data and music. Simply attach Revocharge to the universal mount, and connect your computer to the phone via the USB input.

Charge all you want ...

Most wireless chargers offer you a one-time charge. But what if you expect to be away from a plug for days? Campers, adventurers, and even ordinary travelers have experienced those moments of "dead phone."

With Revocharge, you have the option of getting as many additional batteries as you wish. That way, when one battery charge is complete, you know you have another one waiting, just in case.

Finally, a case that's headphone friendly

Revocharge is designed so you can easily plug your headphones in, by opening up the turbo jet cover. You don't have to carry an ugly extension cord with you anymore and enjoy the wireless freedom.

Frequently Asked Questions

How many times can a Revocharge battery power up a phone?

The Revocharge battery is designed to give your smartphone one full charge. After this one cycle, the battery must be recharged. Often times, customers will purchase several batteries, ensuring they have constant access to a full-charge, no matter how long they're away from an outlet.

Which of your products allow me to keep my phone charged?

At this time, Revocharge provides full-power charges to smartphones via the iPhone 5 and Samsung s4 cases, desk mount and car mount.

Do I have to take my Revocharge phone case off to charge my phone?

No. The Revocharge phone case fits seamlessly into your desk mount. The desk mount is designed to provide a charge to both your smartphone *and* Revocharge battery, simultaneously saving you time and hassle.

Which parts of my smartphone won't I have access to if I use your phone case?

Actually, none. This was a focus of ours, to design a smartphone case that didn't prevent you from accessing your phone's features. With Revocharge, you maintain complete control over your phone, including access to headphone jacks and USB port. Access to your USB port makes it easy to sync data and music on the go.

How, exactly, do I "charge" my phone with Revocharge?

It couldn't be easier to charge your phone with Revocharge. The moment you snap the Revocharge battery to the back of your phone case, the charging process will begin. LED lights displayed on the back of the battery will monitor the process and inform you of when the charge is complete.

What makes you different from other wireless chargers?

Good question. Aside from the sleek design and complete access to all of your phone's features, Revocharge also features a patent-pending universal mount that allows you to attach your phone - via earth magnets - to an arm band, car mount, belt clip or desk mount. Revocharge also uses something called *conductive* charging, unlike most other wireless chargers.

What's so good about conductive charging?

Conductive charging allows Revocharge to power up your phone as if it's plugged into a wall, because of the direct pin-to-ring connection. Many wireless chargers use inductive charging which loses up to 30% of power during the transfer process. Not only does this make the charger less effective, but it can also lead to dangerous radiation and heat levels.

What, exactly, is Autosense?

Autosense is a technology that allows your Revocharge case to provide a full charge to any smartphone device. Each smartphone requires different levels of charges in order to get a *full charge at full speed*. Most universal chargers fail to meet the varying needs of the many smartphones on the market. Revocharge, however, is able to provide a full charge, no matter what, because of its built in Autosense technology.
