

Remote Medical Technologies' iMedHD2™ Endoscopic Teleultrasound solution provides distinct high definition imaging performance and cost-effective sustainability for diagnostic confidence.

Difficult-to-image patients? You no longer need to compromise premium performance, image quality or live, real-time sharing. Collaboration from multiple devices and systems with *Remote Medical Technologies' iMedHD2™ Endoscopic Teleultrasound* solution makes it easier to automate workflow and increase efficiencies.

When time is of the essence, iMedHD2™'s secure, HIPAA compliant, live sharing capabilities allows for an immediate informed diagnosis with image resolutions of up to 1920 x 1080 that provide you with spectacularly crisp views. Pioneering technologies that offer superior image quality for your endoscopic teleultrasound systems are upgradable, expandable, and are incredibly user friendly.

iMedHD2™ ENDOSCOPIC TELEULTRASOUND SYSTEM:

- Multiple clinicians can easily communicate ~ All participants have shared pointing and annotation abilities.
- Dynamic browser control for an excellent live HD viewing experience - All can easily adjust image display, view live snapshots and video with complete audio.
- With RMT's phone-home capability the solution can be easily moved to any location for flexible use and provides significant cost benefits.
- Enables medical clinicians to use live 1080p HD imaging and live, high resolution images of existing equipment.
- All that is needed is any PC or MAC web browser and a broadband Internet connection. No need for special hardware or software.
- Incredibly intuitive and easy to use, even for first-time users ~ No manual is necessary.
