Net Access Launches FLEX*Services* Portfolio of Managed Hybrid Cloud and Hosting Solutions

New Solutions Bridge the Gap Between Internet Facing and Dedicated Private Cloud

CEDAR KNOLLS, N.J. [July 22, 2014] – Net Access, a leading colocation, cloud and managed services provider announced today the immediate availability of "**FLEX***Services*", a fully managed integrated suite of IT infrastructure services enabling customers to easily and rapidly deploy complex hybrid solutions.

According to a recent Gartner report, nearly 50% of large enterprises are expected to be using hybrid cloud by 2017. TechNavio believes hybrid cloud spend will be $79.54Bn globally based on a study issued earlier this year.

"Although the term hybrid cloud has been around for a while, the number of providers that can truly address the need for cross platform solutions is very small," said Raul Martynek, CEO Net Access. "For nearly twenty years, we have been meeting and exceeding our customers' expectations by providing flexible, innovative solutions that drive clear business value. Today, we offer customers the ability to easily integrate cloud technology and colocation into one platform, thereby lowering overall costs and improving performance."

The launch of Net Access' fully integrated managed **FLEX***Services* portfolio enables customers to easily build solutions to meet their IT needs for today and in the future without the complexities or overhead associated with designing, building and maintaining the complete infrastructure themselves.

In addition, Net Access **FLEX***Services* are backed by:

- 24x7 support with onsite technical hands
- 100% Platform Availability SLAs
- 100% Internet Accessibility SLAs
- 2 Hour Hardware Replacement Guarantee

"We are very excited at the launch of our fully integrated **FLEX***Services*," said Dan Cech, CTO "As an industry innovator, we made the commitment and investment early on to ensure that our solutions would always work seamlessly together -- from our base colocation and security services through to public and private cloud enabling true hybrid cloud capabilities."

Net Access' **FLEX**Services fully integrated portfolio of virtualized and dedicated infrastructure products addresses customers' hybrid IT & cloud needs, and includes the following:.

- **FLEX**Servers - Managed Dedicated Servers and bare metal private cloud
- **FLEX**PrivateCloud - Dedicated private infrastructure with customer defined resource pool management
- **FLEX**VirtualDC - Virtual Data Center (DaaS) for customer defined resource provisioning on shared infrastructure
- **FLEX**VServers - Managed Cloud based virtual servers
- **FLEX**Backup - Dedicated and shared cloud backup
- **FLEX**Storage - Multi-tier dedicated and shared storage
- **FLEX**Security - Analytics and Monitoring with DDoS Mitigation, Managed Dedicated and Virtual Firewalls with IDS/IPS/Anti-virus and SPAM filtering
- **FLEX**Colocation - Flexible colocation solutions from rack to cage with onsite 24x7 technical hands
- **FLEX**Bridge - Private connectivity to all **FLEX**Services from within the data center environment and customer site for increased security and performance
