Mobile Doc Scanner Application by STOIK Soft Puts the Power of Desktop Scanning into Tablets

Enabled for Intel® Atom™ Tablets for Android*

A revolutionary new app from the developers at STOIK Soft harnesses all the capabilities of desktop scanners right onto mobile devices. Clear, sharp images of paper documentation can be quickly replicated, stored and shared within this neat, versatile app. Now, the MDScan app is compatible with high-performance Android* tablets so that a larger base mobile device users can take advantage of this remarkable technology.

Eliminating the extra step of desktop transference, the MDScan app can produce precise images with delineated borders, perspective correction and brightness equalization so that paperwork is easily and accurately reproduced in high quality PDF or JPG format. All document conversion is performed locally on the device and batch capture fires off sharp, multi-page documents quickly. The app allows easy upload to cloud services for archiving or export to any application that supports these types of files. Legible, convenient data management just got faster and simpler.

The implications for the average user's workload are obvious: less paper means less storage and portable, handheld scanning means less cumbersome equipment, less time and more information manageability and versatility.

Features of MDScan for Intel Atom Tablets for Android*

- Clear, User-friendly Interface
- High Resolution Scans
- PDF or JPG Format
- Border Detection
- Brightness Equalization
